## 1. Outline of field observations during 1997 – 1998

A five-year glaciological program, the deep ice coring project at Dome Fuji, Antarctica, was started in 1992. Dome Fuji station is located on the second highest dome in East Antarctica ( $77^{\circ}19'01''S$ ,  $39^{\circ}42'12''E$ , 3,810 m a.s.l.). In 1991 and 1992, the 32nd and 33rd Japanese Antarctic Research Expeditions (JARE-32 and JARE-33) extended new routes from Mizuho Station to Dome Fuji about 1,000 km inland from Syowa Station (FUJII, 1992; KAMIYAMA *et al.*, 1994). In 1993-94, three oversnow traverses were carried out by JARE-34 (MOTOYAMA *et al.*, 1995a). Shallow ice coring 112 m deep and casing of the borehole at Dome Fuji were carried out from December 1993 to January 1994 by JARE-34 (MOTOYAMA *et al.*, 1995b). In 1994-95, four oversnow traverses were performed by JARE-35 (SHIRAIWA *et al.*, 1996). JARE-35 constructed the buildings of Dome Fuji Station in the 1994-95 season (SHOJI *et al.*, 1996). In 1995-96, the wintering-over party of JARE-36 first carried out deep ice coring at Dome Fuji Station. Glaciological and meteorological observations were also carried out during that period both at the station and along the 1,000 km long traverse route between Syowa Station and Dome Fuji Station (AZUMA *et al.*, 1997). In 1996-97, JARE-37 carried out the second wintering for deep ice coring to 2503 m depth at Dome Fuji Station. The observations started by JARE-36 were basically continued. In addition, radar sounding of the ice sheet was done during oversnow traverses and at Dome Fuji Station (FUJITA *et al.*, 1998)

In 1997-1998, the wintering-over party of JARE-38 carried out mainly glaciological and meteorological observations. Oversnow traverses carried out in this period are listed in Table 1-1. Table 1-2 shows the glaciological and meteorological observations conducted on the oversnow traverses. The participants and their assignments in the JARE-38 program are listed in Table 1-3. Glaciological observations at Dome Fuji Station are summarized in Table 1-4.

We would like to express our sincere thanks to all members of JARE-38 who extended generous and long term support in the field work.

Table 1-1. Oversnow traverses carried out by JARE-38 from December 1996 to February 1998

Traverse No	Period from to		Traverse Route from through to	Distance (km)	Participants	Oversnow Vehicle
1-a	29 Dec. 1996	2 Jan 1997	S16 Mizuho	270	13	SM50(4), SM100(3)
	-b	2 Jan. 1997	Mizuho Dome F	730	5	SM100(2)
	-c	2 Jan 1997	Mizuho Dome F	730	11	SM50(4), SM100(2)
	-d	25 Jan. 1997	Dome F S16	1,000	8	SM50(3), SM100(3)
2-a	15 Sep 1997	20 Sep. 1997	Syowa Mizuho	270	6	SM50(1), SM100(1)
	-b	22 Sep. 1997	Mizuho Syowa	270	6	SM50(1), SM100(1)
3-a	10 Oct 1997	28 Oct 1997	Syowa Dome F	1,032	8	SM100(4)
	-b	3 Nov. 1997	Dome F Syowa	1,032	8	SM100(3)
4-a	22 Nov 1997	27 Nov 1997	Dome F Dome Camp Dome F	354	4	SM100(2)
	-b	8 Dec 1997	Dome F S79E42 5 Dome F	525	4	SM100(2)
5-a	17 Jan 1998	1 Jan 1998	Dome F S16	1,000	6	SM100(3)
	-b	24 Jan 1998	Dome F S16	1,000	8	SM50(2), SM100(3)

SM50 and SM100 are types of oversnow vehicles. The numbers of each type vehicle are shown in parentheses.

Traverses 1-b and 1-d were joint traverse with JARE-37. Traverse 5-b was a joint traverse with JARE-39.

Table 1-2. Glaciological and meteorological observations during the oversnow traverses.

Item	Interval	Traverse No.	Main observers
Snow accumulation along routes	2km	1-a, 1-c, 2, 3-a and 4-a	Hirasawa, Nakajima, Kurita, Kizu and Motoyama
Stake farm and stake row		1-a, 1-c, 2, 3-a and 4-a	Hirasawa, Nakajima, Kurita, Kizu and Motoyama
Snow sampling	10km	1-a, 1-c, 1-d, 3-a, 4 and 5-b	Motoyama, Li, Fujii and Yamanouchi
Pit observation of deposited snow		1-d and 4	Li, Fujii and Motoyama
Surface snow density		1-a, 1-c and 4	Li and Motoyama
Set-up and maintenance of AWS		1-a, 1-d, 3-a and 5-b	Motoyama, Nakajima, Fujita, Kizu and Suzuki
GPS observation		1-a, 2, 3, 4 and 5b	Motoyama, Kanao and Higashi
Gravity observation		3 and 5b	Higashi and Kawabata
Meteorological observations		1, 2, 3, 4 and 5	Hirasawa, Nakajima, Kurita, Kizu, Motoyama and Kaneto

AWS: abbreviation of Automatic Weather Station

Drs. Fujii and Fujita were members of JARE-37.

Dr. Suzuki was a member of JARE-39.

Dr. Li was an exchange scientist in JARE-38

Table 1-3. Participants of the oversnow traverses and their assignments in the JARE-38 program.

Name	Assignments	Traverse No.
Susumu KANETO*	Deputy leader, Meteorology	1-a, 1-c, 5-b
Hideaki MOTOYAMA*	Glaciology	1-a, 1-b, 4-a, 4-b, 5-b

Table 1-4. Glaciological observations carried out at Dome Fuji Station in 1997-1998.

Item	Interval	Main observers
Snow accumulation measurement (36-stake farm)	15 days	Motoyama and Kawamura
Snow sampling	15 days	Motoyama
Air and aerosol sampling	monthly	Hirasawa, Motoyama
Pit observation of deposited snow	monthly	Motoyama
Snow temperature	10 minutes	Motoyama
Precipitation	daily	Motoyama
Sublimation from surface snow	daily	Motoyama
GPS continuous observation (Sep'97 - Jan'98)	30 sec	Motoyama

## 2. Net accumulation of snow

Observers: JARE-36: Takao KAMEDA and others

JARE-37: Shuji FUJITA and others

JARE-38: Hideaki MOTOYAMA, Yasushi KAWAMURA,  
Naohiko HIRASAWA, Tetsuji NAKAJIMA,  
Kuniaki KURITA, Nobuhiko KIZU and others

Net accumulation of snow was measured by the stake method along oversnow traverse routes in the 1997-98 season (Fig. 1).

### 2.1. Route S-H-Z (Mizuho Route)

Stake heights along the route were measured in December 1995 by JARE-36 (AZUMA *et al.*, 1997), and in December 1996 and September 1997 by JARE-38. The height differences which approximate the net balance of snow along the routes are tabulated in Table 2-1. The last column of the table gives approximately the annual net accumulation of snow. Minimum readings were 1 cm.

### 2.2. Route MD (Dome Fuji Route)

Stake heights along the route from IM0 to DF80 during the 1995 – 1997 season were measured along the same traverse as the Mizuho route. All data along the route are shown in Table 2-2. The last column of the table gives approximately the annual net accumulation of snow. Minimum readings were 1 cm.

### 2.3. Route DF (JARE-26 Route)

Route DF was set by JARE-26 in 1985 (AGETA *et al.*, 1987). Stake heights along the route were measured again in November 1997 by JARE-38. All data along the route are shown in Table 2-2. Minimum readings were 1 cm. The last column of the table gives the positions of stakes which were re-measured by global positioning system.

### 2.4. 36-Stake farms, 50-stake row, 100-stake row and 101- stake row along the route

36-stake farms (100 m x 100 m in area, see Figure 2 in AZUMA *et al.*, 1997) were set up at S16, H68, H180, S122 and Z40 along the Mizuho route. Stake heights of the farms were measured by JARE-36, -37 and -38 on the way to and from Dome Fuji Station. The results are shown in Tables 2-4, 2-5, 2-6, 2-7 and 2-8. The last column of the table gives approximately the annual net accumulation of snow; the last row gives averages

and standard deviations of net snow accumulation for each period.

A 101-stake row located at Mizuho Station was measured (see Figure 3 in AZUMA *et al.*, 1997). The results of the measurements are given in Table 2-9.

50-stake rows were set up at MD180, MD364, MD560 and DF80. These stake rows are perpendicular to the prevailing wind direction, and the distance between stakes is 2 m (see Figure 4 in AZUMA *et al.*, 1997). The results are shown in Table 2-10, 2-11, 2-12 and 2-13.

A 100-stake row was installed at Dome Camp by JARE-26. The distance between stakes is 5 m. The result is shown in Table 2-14.

### 2.5. 36-stake farm at Dome Fuji Station

A 36-stake farm was established 300 m from Dome Fuji Station by JARE-36. JARE-36 conducted the measurements in 1995. JARE-37 and -38 continued in 1996 and 1997. The distance between stakes is 20 m. This stake-farm is located north-east from the station (see Figure 5 in AZUMA *et al.*, 1997). This direction corresponds to the prevailing wind direction at Dome Fuji. Heights of 36 stakes were measured twice each month. The results are shown in Table 2-15. The last column of the table gives approximately the annual net accumulation of snow, and the last row gives averages and standard deviations of net accumulation of snow for each period. Minimum readings were 0.5 cm.

### **3. Surface snow density along the traverse route**

Observers: Hideaki MOTOYAMA and Yuansheng LI

Surface snow density was measured during traverses 1-a, 1-c, 4-a and 4-b in Table 1-1. A cylindrical type snow sampler (80 mm in diameter, 200 mm in length) was used. The weight of snow in the sampler was measured using a spring balance. Total error of the snow density measurements is estimated to be on the order of 30 kg/m<sup>3</sup>.

Table 3-1 shows surface snow density during traverses 1-a and 1-c. Table 3-2 shows density during traverses 3-a and 3-b. To select sites for measuring surface snow densities, we choose areas at which the surface snow conditions seem to be the most typical at the sites.

The surface snow densities along the traverse route have been published in Azuma *et al.* (1997) and Fujita *et al.* (1998).

#### 4. Snow temperature data at Dome Fuji Station

Snow temperature at Dome Fuji Station was measured at depths of 0.01, 0.1, 0.2, 0.5, 1, 2, 5 and 10 m using platinum 100 ohm resistance sensors (3-wire type) with data loggers (Datamark LS-3000PtV, Hakusan Co. and KADEC-US6, Kona System Co.). JARE-36 started the measurements in 1995 (AZUMA *et al.*, 1997). JARE-37 and JARE-38 continued in 1996 and 1997 (FUJITA *et al.*, 1998). The distance between the station and snow temperature measurement sites was about 50 m (see Figure 5 in AZUMA *et al.*, 1997). Snow sometimes accumulated on sensors, thus, sensor depth changed. The resulting changes of surface level were measured with snow stake as in JARE-37. This procedure is different from the JARE-36 observations. Data were recorded at 10-minute intervals. Maximum resolution of snow temperature was 0.1°C. The temperature resolution at depths of 1, 2, 5 and 10 m was changed from 0.1 to 0.01 °C after 15 April 1997. The data logger was set in the room of Dome Fuji Station, where the temperature was about 20°C.

Table 4-1 shows the changes in snow surface level. Table 4-2 shows the snow temperature data at Dome Fuji Station at 12 hour intervals.

## 5. Surface meteorological data during oversnow traverses

Observers: Naohiko HIRASAWA: Traverse 1-a, 1-c, 4-a and 5-a

Tetsuji NAKAJIMA: Traverse 1-a, 1-c and 1-d

Kuniaki KURITA: Traverse 2-a and 2-b

Nobuhiko KIZU: Traverse 3-a and 3-b

Hideaki MOTOYAMA: Traverse 4-b

Susumu KANETO: Traverse 5-b

Meteorological observations were carried out during the oversnow traverses several times a day. We measured air pressure (Pa), air temperature (Ta), wind direction (WD) and wind speed (WS) with the instruments and observed visibility (V), weather (W), cloud amount in tenths (N) and individual cloud amount and genus (CL). The instruments and accuracy of the measurements are given in Table 5-1. The notation used in this section is shown in Table 5-2.

Tables 5-3, 5-4, 5-5, 5-6 5-7, 5-8 and 5-9 show meteorological data observed during traverses 1-a and 1-c, 1-d, 2-a and 2-b, 3-a and 3-b, 4-a and 4-b, 5-a, 5-b, respectively. The meteorological data during traverses between S16 and Dome Fuji have been published in MOTOYAMA *et al.* (1995), SHIRAIWA *et al.* (1996), AZUMA *et al.* (1997) and FUJITA *et al.* (1998).

Table 5-1. Instruments and accuracy of meteorological observations.

Item	Instruments	Accuracy
Air pressure	Aneroid gauge	$\pm 1\text{hPa}$
	Vibrating cylinder type (Traverses 4-a, 4-b and 5-b)	$\pm 0.2\text{hPa}$
Air temperature	Sling type glass thermometer	$\pm 0.5^\circ\text{C}$
Wind direction	Magnetic compass	$\pm 5^\circ$
Wind speed	Portable 3-cup anemometer	$\pm 0.5\text{m/s}$
Visibility	Visual observation	
Cloud amount	Visual observation	
Weather	Visual observation	
Individual cloud	Visual observation	

Table 5-2. Notation used in tables in this section.

LT: Local standard time at Syowa Station (UTC + 3 hours)

Pa: Air pressure (hPa)

Ta: Air temperature ( $^\circ\text{C}$ )

WD: Wind direction

WS: Wind speed (m/s)

V: Visibility (km)

W: Weather

○ Clear, Ⓛ Fine, Ⓜ Cloudy (upper level clouds were predominant), Ⓝ cloudy

\* Snow, ↗ Drifting snow, ↘ Blowing snow, ↙ Snow storm,

↔ Diamond dust, ≡ Fog, ≡ Low fog, ≡ Ice fog

N: Cloud amount in tenths

CL: Individual cloud amount and genus
