

SEISMOLOGICAL BULLETIN OF SYOWA STATION, ANTARCTICA,

1987

JUNPEI AKAMATSU

(Disaster Prevention Research Institute,

Kyoto University, Gokasho, Uji 611)

and

KATSUTADA KAMINUMA

(National Institute of Polar Research, Itabashi-ku, Tokyo 173)

1. Introduction

The seismic observation system at Syowa Station is schematically illustrated in Fig. 1. There are two types of seismometers, the one called SP (short period) or HES with the natural period of 1.0 s of the pendulum and the other called LP (long period) or PELS with the natural period of 12.0 s. HES has been operated since 1966 (Kaminuma et al., 1968). A new vault for seismographs was built in March 1970 (Kaminuma and Chiba, 1973). PELS was installed at Syowa Station in 1982. The coordinates of the seismographic vault are 69°00'31.7"S in latitude and 39°35'31.6"E in longitude. The elevation is 20 m above the mean sea level.

The system was maintained by J. Akamatsu throughout the wintering season of JARE-28 (February 1987 - January 1988).

2. Data

The overall frequency response and the magnification of the short-period and long-period seismographs (Z, N-S and E-W

components) are shown in Fig. 2. The system clock has been connected to the recovered UTC from NNSS satellites since February 1987 (see Fig. 1). The accuracy of the read-out data can be estimated as 0.2 s. Considering the delay time of 1-2 years between the publication of this report and the observing wintering period, which is inevitable due to the restriction of transport ability between Tokyo and Syowa Station, the PDE (Preliminary Determination of Epicenters) reports by NEIS (National Earthquake Information Center) are referred to and only the teleseismic events are edited.

2.1. Read-out data

The onset of the all events detected on the monitoring seismograms of the short and long periods was picked out from the pen-monitor records. The onset times of P-arrivals are listed in Table 1. Symbols E and I in the phase column denote weak and sharp onsets, respectively. The direction of the initial ground motion is denoted by + for the upward direction and - for the downward direction. Arrival time is in UTC.

Some earthquakes were determined as the local events using the data of the tripartite array network which was installed around Syowa Station in 1987 (Akamatsu *et al.*, 1988). The local events are denoted with the symbol of the single asterisk in Table 1. The teleseismic events reported in the PDE of NEIS are shown with the serial numbers (#-xxx) in the table. The events detected on the only long period seismograms are shown with the double asterisks.

2.2. Teleseismic events

Figure 3 shows the location of 250 teleseismic events of

which initial phases were detected at Syowa Station. The list of hypocenters of the teleseisms is shown in Table 2 with the same serial numbers as given in Table 1. The seismograms of these events are available from National Institute of Polar Research.

Pen-monitor examples of 17 teleseismic events are given in the Appendix. The magnitude of the events in the appendix is mostly larger than 6. Two events of #-11 and -13 were given with the short period seismograms of three components and the long period seismogram of the vertical component. The event of #-138 has no short period seismogram. Other 14 events give both short and long period seismograms of three components. However the short period seismograms of last three events of #-224, -225 and -238 were shown the vertical component of the tripartite array (Akamatsu *et al.*, 1988).

Two events of #-109 and -110 occurred within 100 min and the seismograms of #-109 were given for two hours. The initial phases of #-110 were not detected on the long period seismograms for the large amplitude of coda waves of #-109.

3. Staffs of Data Process

The seismic observations at Syowa Station are organized by one of authors, K. Kaminuma and Dr. K. Shibuya of National Institute of Polar Research. Information on the seismic observation at Syowa Station is available from them. Ms. Y. Shudo of National Institute of Polar Research has scaled and edited all events, and she prepared this manuscript. The authors express their sincere thanks for her cooperation.
