Introduction

This newsletter reports the classification of meteorites collected from ice fields near the Yamato Mountains and Nansen Ice Field by JARE (Yamato 74, 75, 79, 86, 98, and 00, Belgica 98, and Asuka 87, 88, and 90 meteorites) and meteorites from the Nansen Ice Field by the Japan-Belgium joint expeditions (Asuka 09, 10, and 12 meteorites). Asuka 09, 10, and 12 meteorites are shared by National Institute of Polar Research (NIPR) in Tokyo and Royal Belgian Institute of Natural Sciences (RBINS) in Brussels. This newsletter includes 1,000 meteorite names including 27 carbonaceous chondrites (16 CM, 4 CO, 2 CV, 1 CH, 1 CK, and 2 ungrouped), 2 lodranites, 2 ureilites, 28 HED meteorites, and 1 martian meteorite (shergottite).

Classification

The classification was made with visual inspection of meteorites and petrographic observations of polished thin and thick sections as well as compositions of major minerals (olivine, pyroxene, and plagioclase) obtained by electron microprobes (JEOL JXA 8800 and 8200 at NIPR). Typical numbers of olivine analysis for ordinary chondrites are ~20-30. Enstatite chondrites were classified into EH and EL groups on the basis of Si contents in kamacite. Table 1 presents the results of classifications (groups, averages and ranges of olivine Fa and low-Ca pyroxene Fs, fracturing, and weathering degrees).

Sample requests

Requests for Yamato, Asuka (87, 88, and 90) and Belgica samples will be reviewed in a timely manner by the curator at NIPR and requests of Asuka 09, 10, and 12 meteorites by scientific members at NIPR, RBINS, Vrije Universiteit Brussel (VUB), and Université Libre de Bruxelles (ULB).

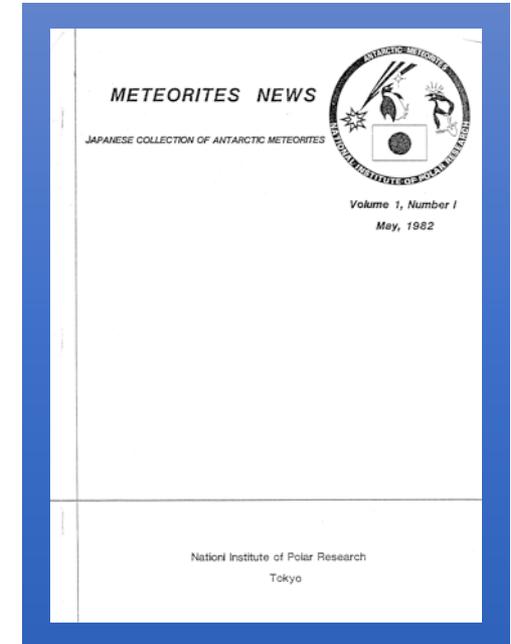

Acknowledgments. We thank T. Ojima and S. Ikadai for sample preparations and technical assistance, M. Shigeoka for preparing polished thin sections, M. Naito, S. Hashimoto, M. Yasutake, and R. Kanemaru for electron microprobe analyses.

Table 1. List of meteorites classified in this volume.

初期分類データ公表と隕石配分

- 初期分類データの公表
 - Meteorite newsletter Vol.1 (1982) – 25 (2016)
 - これまで62% (10563個) の南極隕石が分類された。
最近6年で、4,920個 (~29%) の隕石が分類された。
 - Vol. 26 (2018) (N = 1,000)
 - Vol. 25 (2016) (N = 800)
 - Vol. 24 (2015) (N = 615)
 - Vol. 23 (2014) (N = 437)
 - Vol. 22 (2013) (N = 1,034)
 - Vol. 21 (2012) (N = 1,034)
 - Vol. 1-20 (1982-2011) (N = 6,291)
 - 国際隕石学会 隕石命名委員会
 - 2008年の覚書による
 - 2010年以降に分類された隕石
 - Meteorite Bulletin (Meteorite & Planetary Science)
 - 隕石学会データベース
- 研究者への試料の配分
 - ほとんどの隕石は、キュレーターの判断で配分の可否が決定される。
 - 希少な隕石に関する計画書は外部レビュアーによるレビューを受ける。
 - 南極隕石研究委員会で承認される。

Yamato 981031

Basic information: Name: Yamato 981031
This is an OFFICIAL meteorite name.
Abbreviation: Y-981031
Observed fall: No
Year found: 1998
Country: Antarctica (Collected by National Institute of Polar Research, Japan)
Mass: 185.8 g

Classification history: MetaSite: 4.7.1 (2006) Lunar (anorth) Recommended: Lunar (anorth) [explanation]
This is 1 of 71 approved meteorites classified as Lunar (anorth). [show all]
