

Preface

This volume is the third in a series of reports being issued as regards the Glaciological Research Program in Mizuho Plateau-West Enderby Land.

The data in this volume were obtained from the traverses carried out by the JARE-14 parties in 1973-1974; the main task of the glaciological party of JARE-14 was resurvey of traverse routes established by the JARE-10 in 1969, and the task was accomplished with complete success.

I wish to express my heartiest appreciations to Dr. T. Hirasawa, leader of the wintering party of JARE-14, who has contributed extensively and willingly to the research. Many thanks are also due to the members of the research parties for their energetic efforts in conducting observations and surveys in the field.
