

CONTENTS

Abstract	1
1. Introduction	3
2. Observations and data analyses	6
3. Observation results	16
3.1. Characteristics of atmospheric turbulence in stable stratification at Syowa Station	16
3.1.1. Wind above the sloping terrain and standard deviation of wind speed fluctuation	16
3.1.2. Gustiness and gust factor against U_{20}	18
3.1.3. Relations between Ri and ratios of standard deviations to friction velocity	19
3.1.4. Energy dissipation rate	19
3.1.5. Frequency distribution of wind speed	20
3.1.6. Eulerian auto-correlation coefficient	22
3.1.7. Scale of turbulence	23
3.1.8. Power spectral density and maximum spectral density	25
3.2. Statistical analyses of general meteorological elements at Syowa Station ..	27
3.2.1. Frequency distribution of 16 wind directions	27
3.2.2. Frequency distribution of mean wind velocity for 16 wind directions	28
3.2.3. Frequency distribution of air temperature for 16 wind directions	29
3.2.4. Frequency distribution of vertical air temperature gradient for 16 wind directions	30
3.2.5. Frequency distribution of wind velocity	32
3.2.6. Relation between U_{10} and mean air temperature and annual variation of warming ratio	33
3.2.7. Relation between U_{10} and vertical air temperature gradient	34
3.2.8. Frequency distribution of air temperature	36
3.2.9. Relation between air temperature and vertical air temperature gradient	36
3.2.10. Frequency distribution of vertical air temperature gradient	38
3.2.11. Characteristic of meteorological observation at Syowa Station	40
3.2.12. Occurrence ratio of ground inversion and altitude of ground inversion	41
3.2.13. Annual variations of air temperatures and air temperature differences	42
3.2.14. Seasonal profiles of air temperatures	43
3.3. Observations of atmospheric surface layer, turbulent heat transfer and visibility	44

3.3.1.	Relation between stability ratio and ratio of linear wind velocity component to U_6	44
3.3.2.	Variations of momentum diffusion coefficient, mixing length and Richardson number against height	46
3.3.3.	Relation between U_6 and vertical air temperature gradient above the sea ice	48
3.3.4.	Relations between wind velocity and aerodynamic roughness length and between wind velocity and friction velocity	49
3.3.5.	Relation between visibility and density of drifting snow	51
3.3.6.	Relation between visibility and friction drag	52
3.3.7.	Sensible heat flux of energy budget equation	54
3.3.8.	Turbulent heat flux obtained from functional formula including wind component	56
4.	Concluding remarks	59
	Acknowledgements	62
