

CONTENTS

Abstract	1
1. Introduction	2
2. Requirements to Be Met by Wind Electric Generator for Antarctic Use .	3
3. Outline of Wind Electric Generator NU-101	4
4. Analysis of Performance of Axial-Flow Air-Turbine	6
4. 1. Outline of velocity distribution	6
4. 2. Notations	7
4. 3. Relations between thermodynamic quantities	10
4. 4. Precompression of air in front of an air-turbine	11
4. 5. Expansion of air in passing through stator	11
4. 6. Air flow passing through rotor	12
4. 7. Graphical representation of air states on i - s or i^* - s diagram	13
4. 8. Output power and efficiencies of air-turbine	14
4. 9. Flow rate of air and ideal specific output	15
4.10. Estimation of air-turbine efficiencies	20
5. Design of Air-Turbine Blades	22
6. Indicated, Frictional and Brake Torque of an Air-Turbine	26
7. Starting Torque and Starting Wind Velocity	28
8. Off-Design Performance of Wind Air-Turbine	29
9. Comparison between Air-Turbine with Stator and That without Stator .	32
10. Details of Wind Electric Generator NU-101	35
11. Results of Test Runs in Tokyo and Syowa Station	37
