

## CONTENTS

Abstract .....	1
1. Introduction .....	2
2. Details of the NU-102.....	3
2.1. General feature of the NU-102 .....	3
2.2. Wind air-turbine .....	5
2.3. Speed-up gear .....	7
2.4. Electric eddy-current brake .....	8
2.5. Installing the NU-102 in the field .....	12
2.6. Electric generator .....	12
3. Output Performance of the Air-Turbine NU-102 .....	14
3.1. Experiments on the effect of the number of stationary blades .....	14
3.2. Turbine torque and maximum speed.....	16
3.3. Turbine output and optimum turbine speed .....	17
4. Combined Performance of the NU-102 with Electric Generator under Loads .....	20
5. Torque Matching between Air-Turbine and Generator.....	25
6. Controlling Turbine Speed by Eddy-Current Brake.....	29
7. Efficiencies of Wind Air-Turbine.....	33
7.1. Total-to-total efficiency and total-to-static efficiency .....	33
7.2. Starting wind velocity and friction torque .....	34
7.3. Theoretical brake output and torque of the air-turbine .....	35
8. Theoretical Analysis of the Indicated Turbine-Torque .....	38
9. Field Test in Antarctica of the NU-102 .....	41
9.1. General performance at high wind velocity .....	41
9.2. Electrical braking test .....	45
10. Conclusions.....	47
Acknowledgment.....	48
References .....	48
Appendix .....	50
