

CONTENTS

Abstract	1
1. Historical Review of Development of Syowa Station	2
2. A 45-kVA Diesel-Electric Power Generating Plant with Waste Heat Recovery System	8
2.1. Ice or snow-melting plant utilizing exhaust-gas energy of diesel engines	9
2.2. System for making hot water with coolant of diesel engines	11
2.3. Insulated hot and cold water feeding pipe	11
2.4. Fuel preheating room and toilet	14
2.5. A 10-k l snow or ice-melting and cold-water storage tank installed outdoors	14
3. A 65-kVA Diesel-Electric Power Generating Plant with Waste Heat Recovery System	17
4. A 110-kVA Diesel-Electric Power Generating Plant with Waste Heat Recovery System	22
5. Estimation of Heat Balance of Diesel-Electric Generators	27
6. Exhaust-Gas Heat Exchangers	39
6.1. Shell-and-coil type exhaust-gas heat exchangers	39
6.2. Vertical shell-and-tube type exhaust-gas heat exchangers	47
6.3. Vertical fin-tube type exhaust-gas heat exchangers	49
7. Experimental Analysis of Exhaust-Gas Heat Exchangers	55
8. Bubble Type Exhaust-Gas Heat Exchanger	62
8.1. Two-stage bubble type heat exchanger for making hot water and melting ice	62
8.2. Experimental analysis of the bubble type heat exchanger	64
9. Heat Exchangers for Recovering Coolant Heat of Diesel Engines	70
9.1. Horizontal shell-and-tube type heat exchangers	70
9.2. Vertical shell-and-tube type water-to-water secondary heat exchanger	75
9.3. Estimation of thermal performance of a shell-and-tube heat exchanger	76
10. Coolant Heat Recovery System at Mizuho Station	79
11. Conclusions	83
Acknowledgments	85
