Introduction

A three-year programme of marine biological investigations in the fast ice area near Syowa Station was planned by the Japanese Antarctic Research Expedition (JARE) as part of the international BIOMASS (Biological Investigations of Marine Antarctic Systems and Stocks) project. One of the main objectives of the programme was to acquire marine biological data and samples with environmental parameters throughout the year to draw out a scheme of Antarctic under-ice marine ecosystems near Syowa Station. This programme commenced in 1982 (JARE-23) and we took part in the second year survey in 1983. The second year survey was stressed on primary producers in the water column and in the sea ice. Series of routine oceanographic observations at selected stations were continued.

In this report, we present oceanographic and marine biological data (Tables 1-4). Some information on plankton samplings made at the routine observations from February 1983 to January 1984 is also given in Tables 5 and 6.

Study Area

From convenience of field work, observations were carried out at three stations out of five stations settled by JARE-23. For routine observations Nos. 1-3, Stn. 4 was substituted for Stn. 5, because open water was extending around Stn. 5. As fast ice around Syowa Station was flowed out between 2 and 3 May, the routine observation was interrupted till June when the sea ice grew sufficient to support a snow vehicle and a sledge. Observation stations (Stns. 1, 3 and 5) were settled again but the position of new stations slightly differed from those of JARE-23. Sampling locations, Stns. 1, 3, 4 and 5 are shown in Fig. 1. The depths at each station were 12, 38, 160 and >700 m, respectively. Seasonal variations of ice and snow thickness at Stns. 1, 3 and 5 are shown in Fig. 2. From late December, puddle formation took place in the Ongul Strait area.

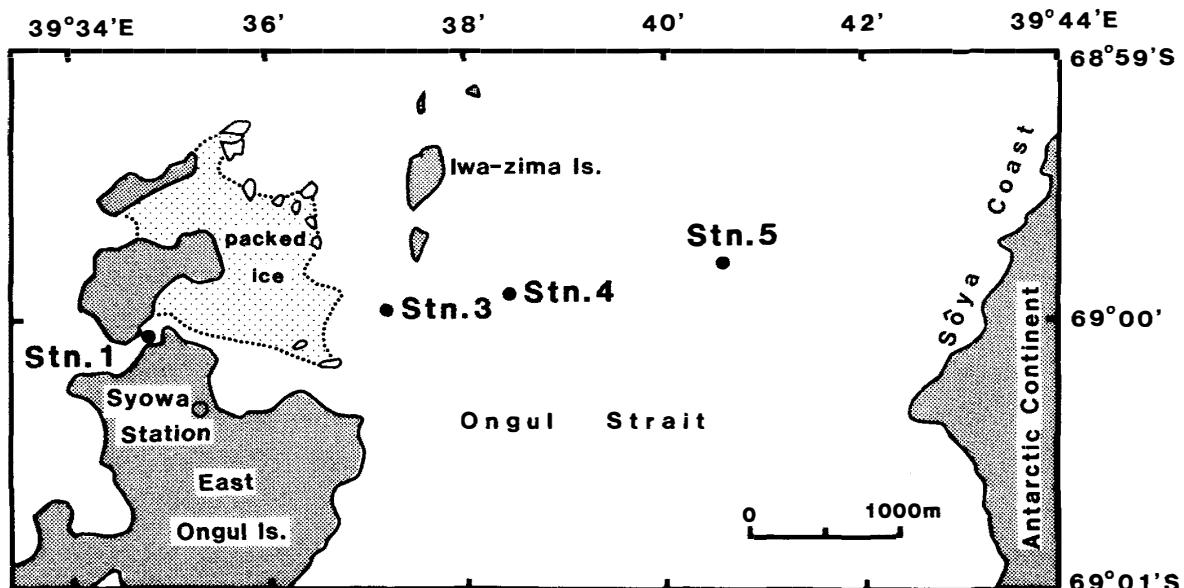

Fig. 1. Sampling locations for routine observations by JARE-24.

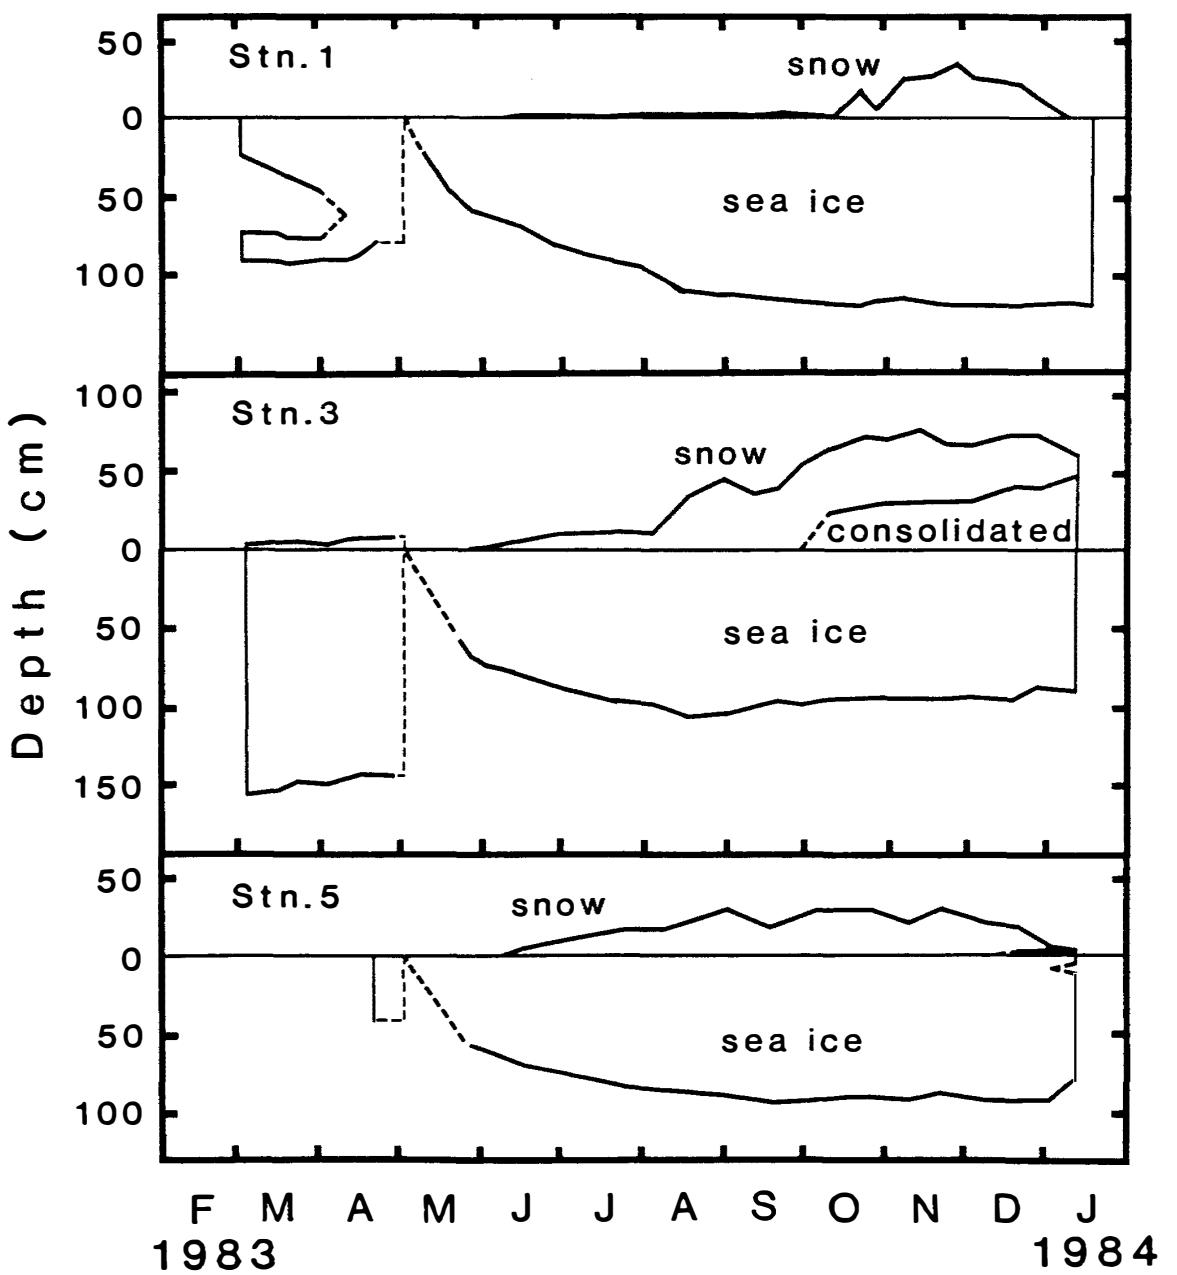

Fig. 2. Seasonal variations of ice and snow thickness at Stns. 1, 3 and 5.

Methods

Routine observations were carried out 11 times from 16 February 1983 to 13 January 1984 at three locations each time. The date of observations are listed below.

| Routine No. | Stn. 1 | Stn. 3 | Stn. 4 | Stn. 5 |
|-------------|---------|---------|---------|---------|
| 1983 | | | | |
| 1 | 18 Feb. | 16 Feb. | 17 Feb. | - |
| 2 | 11 Mar. | 11 Mar. | 9 Mar. | - |
| 3 | 1 Apr. | 29 Mar. | 28 Mar. | - |
| 4 | 4 June | 3 June | - | 6 June |
| 5 | 28 July | 27 July | - | 29 July |
| 6 | 8 Sep. | 10 Sep. | - | 9 Sep. |
| 7 | 5 Oct. | 8 Oct. | - | 7 Oct. |
| 8 | 11 Nov. | 9 Nov. | - | 10 Nov. |
| 9 | 29 Nov. | 29 Nov. | - | 30 Nov. |
| 10 | 16 Dec. | 15 Dec. | - | 14 Dec. |
| 11 | 13 Jan. | 12 Jan. | - | 11 Jan. |

Water samples for physical and chemical analyses were collected from depths listed below using Nansen 1.3-l and Van Dorn 6-l bottles.

| Station No. | Depth (m) |
|-------------|--|
| 1 | 2, 5(4), 8(6), 11(8), |
| 3 | 2.5, 5, 10, 15, 25, 35, |
| 4 | 2.5, 10, 25, 50, 75, 100, 150, |
| 5 | 2.5, 10, 25, 75, 100, 150, 200, 400, 600 |

The depth was measured from sea level. Depths in parentheses at Stn. 1 indicate those for routine observation Nos. 1-3. Additional water samples for plant pigment analysis were collected from 5, 15 and 35 m depth at Stns. 4 and 5.

Methods for physical, chemical and plant pigment analyses were the same as those employed by JARE-23 (Fukuchi *et al.*, 1985). We employed a Hitachi model 320 spectrophotometer with a

sample sippes, a micro-flow cell and a data printer, and a Hitachi model 650-40 spectrofluorometer with a five-cell holder.

Plankton samples were collected by a twin-ring NORPAC net of 45 cm in diameter and 180 cm in side length. The mesh opening of the nets was 25 μm (P25 net) and 100 μm (NXX13 net). Samples of P25 and NXX13 net were fixed with 5-10 % formalin-acetic acid (1:1) and ca. 10 % neutralized formalin respectively. Settling volume of samples were read after two days of sedimentation time.

Acknowledgments

We wish to thank Prof. S. Mae, the leader of JARE-24 and his members for their encouragement and willing cooperation in field work. Thanks are also due to Prof. T. Hoshiai, Dr. M. Fukuchi, Mr. A. Tanimura and Mr. H. Ohtsuka of JARE-23 who paid much effort to start this programme and made field facilities ready to use for us from the beginning of our field observations.
