

Oceanographic Data of the 32nd Japanese
Antarctic Research Expedition
from November 1990 to March 1991

Hiromi Nakamura and Ken-ichi Noguchi

Hydrographic Department, Maritime Safety Agency
3-1, Tsukiji 5-chome, Chuo-ku, Tokyo 104

1. Oceanographic Observations

The track chart of the icebreaker "Shirase" and the station sites of oceanographic observations are shown in Figs. 1 and 2.

Surface water sampling and XBT were made during the cruise. CTD and serial observations were made in the Southern Ocean off Australia.

Four surface drifting buoys and seven XCPs were deployed in the area of the Antarctic Circumpolar Current.

(1) Surface water sampling

Sea surface water sampling for surface temperature measurement and chemical analyses were made twice or three times a day. The results are given in Table 1.

(2) XBT observation

XBT (expendable bathythermograph) observations were carried out at 202 stations in the Southern Ocean en route from Fremantle to Sydney and Breid Bay. The results are given in Table 2 and Figs. 3, 4, 5 and 6.

(3) CTD observation

CTD (conductivity, temperature and depth profiling system of Neil Brown Smart CTD type-c) observations were carried out at 5 stations in the Southern Ocean off Australia.

The results are given in Table 3 and Table 4.

(4) Serial observation

Serial observations were carried out at 6 stations. The results including interpolated and calculated values of temperature, practical salinity, sigma-t and dynamic depth anomaly at each standard depth together with meteorological data are given in Table 5.

(5) Chemical analyses of sea water

The following methods and instruments were used for chemical analyses:

| | |
|--|---|
| Practical salinity | : Conductive salinometer (Auto-Sal Model 8400A) |
| pH | : Digital pH meter (Horiba Seisakujo F-16) |
| Dissolved oxygen | : The Winkler's method with a Metrohm Model E415-20S Titrator. |
| Phosphate-P(*) | : Molybdenum blue method |
| Silicate-Si(*) | : Molybdenum yellow method |
| Nitrate-N(*) | : Modified Morris and Riley method |
| Nitrite-N(*) | : Sulphanilamide and N-(1-naphtyl)-ethylenediamine dihydrochloride were used as reagents. |
| Ammonium-N(*) | : Indophenol method |
| Petroleum oil(**) | : Integrated Global Ocean Service System method |
| Cd, Cu and Zn(**) | : Japan Hydrographic Department method |
| (* The nutrient matters were analyzed with a Shimadzu Model UV-120 spectrophotometer with auto flow cell system.) | |
| (** These items are employed at 19 stations (P1-P19) for surface water samples in order to monitor the level of marine pollution.) | |

The results are given in Table 6.

(6) The tidal stream observation

The tidal stream observation was carried out 50 hours at 70° 16' S, 39° 37' E with a ACM4M (ALEC ELECTRONICS Co.).

Observation depth was 10m below the sea surface. The results are given in Fig. 7.

(7) Current observation with four surface drifting buoys

The first surface drifting buoy was deployed at 49° 37' S, 109° 57' E on December 7, 1990, the second was deployed at 54° 31' S, 110° 04' E on December 8, 1990, the third was deployed at 53° 23' S, 150° 00' E on March 16, 1991, and the fourth was deployed at 48° 36' S, 149° 58' E on March 17, 1991. But the second one died soon.

The trajectories are shown in Fig. 8.

(8) Vertical current observation with XCP

XCP(expendable current profiler, system of Sippican Inc. U.S.A)
observations were carried out at 7 stations as follows. (Figs. 9 and 10):

- | | | |
|---------------------|-----------|-----------------------|
| ① November 23, 1990 | 23:00(UT) | 16°-11' S, 114°-05' E |
| ② December 20, 1990 | 11:30(UT) | 68°-24' S, 23°-49' E |
| ③ February 25, 1991 | 10:20(UT) | 70°-08' S, 24°-00' E |
| ④ March 5, 1991 | 03:00(UT) | 64°-42' S, 46°-47' E |
| ⑤ March 10, 1991 | 05:00(UT) | 62°-00' S, 110°-00' E |
| ⑥ March 13, 1991 | 09:00(UT) | 62°-00' S, 146°-55' E |
| ⑦ March 15, 1991 | 08:50(UT) | 55°-30' S, 150°-05' E |

2. Tidal Observation

The tidal observation at Syowa Station has been carried out since 1965. At present, a pressure gauge (strain gauge) is operated. The sensor is placed in the Nisi-no-ura Cove on East Ongul Island at a sea bottom of about 15m and the data logger is installed in the nearby Earth Science Laboratory.

We had been asked by Mr.K. Nagasaka, a member of the wintering party of JARE-31, to take care of the tide gauge from February 1990 to January 1991.

A new tide gauge (Meisei Denki Co. QWP-8-303D) was set on January 22, 1990 and for backup, the same type gauge was set on January 25, 1991. They have been operated in parallel since then (Fig. 11). Hourly, daily and monthly mean sea levels from February 1990 to January 1991 are given in Table 7.

We have asked Mr. M. Yamamoto, a member of the wintering party of JARE-32, to take care of the tide gauges from February 1991 onward.

Acknowledgments

The authors would like to express their sincere thanks to Prof. S. Kokubun, the leader of JARE-32, and Dr. Y. Fujii, the over winter party leader of JARE-32, and to all the members of the expedition for their helpful support and valuable advice, and to the leader Prof. Y. Naito and the other members of JARE-31 for their cooperation in maintenance and calibration of the tide gauge.

The authors also express their thanks to Captain K. Saito, the officers and the crew of the icebreaker "Shirase".
