

Oceanographic Data of the 34th Japanese
Antarctic Research Expedition
from November 1992 to March 1993

Takehiko HASHIMA and Masaharu NAMIKI

Hydrographic Department, Maritime Safety Agency
3-1, Tsukiji 5-chome, Chuo-ku, Tokyo 104

The results of oceanographic observations on board the icebreaker "Shirase" and tidal observations at Syowa Station, Antarctica are presented in this report. The oceanographic observations were carried out by the summer party of the 34th Japanese Antarctic Research Expedition (JARE-34) during the austral summer of 1992/1993. The tidal observations were carried out by the winter party of JARE-33 from February 1992 to January 1993.

1. Oceanographic Observations

The track of the icebreaker "Shirase" and the sites of oceanographic stations are shown in Figs. 1 and 2.

Surface water was sampled during the cruise. XBT (expendable bathy-thermograph) and serial observations were taken in the Southern Ocean.

Two surface drifting buoys were deployed and three XCP (Expendable Current Profiler) observations were taken in the Antarctic Circumpolar Current.

(1) Surface water sampling

Surface water was sampled twice or three times a day. The results are given in Table 1.

(2) XBT observations

XBT observations were carried out at 128 stations in the Southern Ocean from Fremantle to Antarctica and back to Sydney. The results are listed in Table 2. S.L. (M) in Table 2 indicates surface layer depth in meters. Vertical profiles of water temperature are shown in Figs. 3 and 4.

(3) Serial observations

Serial observations were carried out at 32 stations. Among them, 9 stations in Fig. 2 were in the coastal fast ice around Syowa Station. The results including interpolated and calculated values of temperature, practical salinity, sigma-t and dynamic depth anomaly at each standard depth together with meteorological data are given in Table 3.

(4) Chemical analysis of sampled water

Chemical analysis of sea water collected with a bucket (10L) for surface observation or Nansen sampler (2L) for serial observation was done by the use of the following methods. Chemical analyses for the following (b) - (h) and (I) - (m) are carried out with the methods described by Strickland and Parsons (1972) and Hydrographic Department (1995), respectively.

- (a) Practical salinity : Practical salinity on "the practical salinity scale, 1978". Conductive salinometer (Guildline Autosal salinometer model 8400A).
- (b) Ph :Glass electrode method (Horiba digital pH meter F-16).
- (c) Dissolved oxygen :Winkler method (Metrohom Model E41520S Titrator).
- (d) Phosphate-P :Molybdenum blue method (Shimadzu Model UV-120A Spectrophotometer).
- (e) Silicate-Si :Molybdenum yellow method (Shimadzu Model UV-120A Spectrophotometer).
- (f) Nitrite-N :Naphthylethylenediamine method (Shimadzu Model UV-120A Spectrophotometer).
- (g) Nitrate-N :Cadmium (Cd) – copper (Cu) reduction column, Naphthylethylenediamine method (Shimadzu Model UV-120A Spectrophotometer).
- (h) Ammonium-N :Indophenol blue method (Shimadzu Model UV-120A Spectrophotometer).
- (i) Petroleum oil :n-hexane extraction – fluorophotometric analysis.
- (j) Cadmium (Cd) :Solvent extraction – atomic absorption spectrophotometry.
- (k) Copper (Cu) :Solvent extraction – atomic absorption spectrophotometry.
- (l) Zinc (Zn) :Solvent extraction – atomic absorption spectrophotometry.
- (m) Mercury (Hg) :Cold vapor atomic absorption spectrophotometry.

The results of analytical items (a) to (h) are given in Tables 1 and 3. The results of analytical items (i) to (m) are given in Table 4.

(5) Current observations with two surface drifting buoys

The first surface drifting buoy was deployed at $62^{\circ} 58'S$, $91^{\circ} 00'E$ on March 6, 1993; the second was deployed at $62^{\circ} 59'S$, $113^{\circ} 14'E$ on March 9, 1993. The trajectories are shown in Fig. 5.

(6) Vertical current observations with XCP

XCP (Sippican Inc. U.S.A.) observations were carried out at the following 3 stations.

December 7, 1992 05:13 (UT) $50^{\circ} 18'S$, $109^{\circ} 35'E$
December 9, 1992 09:11 (UT) $59^{\circ} 30'S$, $104^{\circ} 30'E$

March 7, 1993 09:02 (UT) $63^{\circ} 07' S$, $97^{\circ} 00' E$

The results are given in Fig. 6. The XCP data for December 9, 1992 are not shown in this report because they are not available.

(7) Ocean current observations

Ocean current observations were carried out for 10 days (from January 2 to February 11) at $69^{\circ} 00.6' S$, $39^{\circ} 38.1' E$ in the coastal fast ice in Ongul Strait near Syowa Station, with an electromagnetic current meter (ACM8M, ALEC ELECTRONICS Co.), 50 m below the sea surface. The results are given in Fig. 7. Figure 7 also includes change of sea level observed with a tide gauge at Syowa Station.

2. Tidal Observations

(1) Tidal observations at Syowa Station

Tidal observations at Syowa Station have been carried out since 1965. The tide gauge (QWP-8-303D, Meisei Denki Co.) set on the sea bottom of about 15m below the sea surface at Nisi-no-ura Cove, East Ongul Island by JARE-31 members on January 22, 1990, continued operating through the period from February 1992 to January 1993, which this paper describes. Methodology of tidal observations is described by Odamaki *et al.* (1991). In this system, the relative water pressure compensated for atmospheric pressure is measured with a quartz oscillator. The range of the sensor is 0-50 m and its accuracy is 0.01 % to full scale, i.e. 0.005 m. The data sampled 5 times per second are averaged over one minute and record on solid IC memory every 10 minutes. The gauge was maintained by Mr. M. Kanao, a member of the winter party of JARE-33, through the year. Hourly sea level was recorded on the hour. Daily and monthly mean sea levels were calculated from the hourly data. The results are given in Table 5.

(2) Tidal observations at southern Langhovde

Tidal observations at southern Langhovde were carried out for 8 days (from January 11 to February 18) with a pressure gauge (WLR-7, AANDERAA INSTRUMENTS). The sensor was placed at the sea bottom about 3 m below the sea surface. In this system pressure is measured with a quartz oscillator. The range of the sensor is 0-60 m and its accuracy is 0.01 % to full scale, i.e. 0.006 m. The pressure averaged over 40 seconds is recorded in an EEPROM memory every 10 minutes. The data were corrected for atmospheric pressure. Hourly sea level was recorded on the hour. Daily mean sea levels were calculated from the hourly data. The results are given in Table 6 and Fig. 8. Figure 8 also includes sea level data at Syowa Station.

Acknowledgments

The authors would like to express their sincere thanks to Prof. N. Sato, the leader of JARE-34, Prof. Y. Fukuchi, the leader of JARE-33, Prof. R. Naruse, the summer party leader of JARE-34, and to all the members of JARE-33 and JARE-34 for their helpful support and valuable advice. The authors also express their sincere thanks to Mr. M. Kanao, the member of the JARE-33 winter party, who maintained the tide gauge throughout a whole year.

The authors also express their thanks to Captain T. Hisamatu, the officers and crew of the icebreaker "Shirase".

Table 5. Hourly tidal observation data at Syowa Station from February 1992 to January 1993 (Time is LMT(UT+3 hours)).

Station : SYOWA STATION
 Latitude : 69° 00' 28" S
 Longitude : 39° 34' 13" E
 Duration : Feb. 1-Feb. 29 1992
 Unit : CENTIMETER

The zero level of the tide gauge
 relative to the bench mark No. 1040;
 -3.908m Jan. 18 1992
 -3.908m Jan. 20 1993

MONTHLY MEAN

130.2cm

Table 6. Hourly tidal observation data at Langhovde from January 11 to January 18, 1993 (Time is LMT(UT+3 hours)).

Station : Southern Langhovde
 Latitude : 69° 14.64 S
 Longitude : 39° 42.83 E
 Duration : Jan. 11-Jan. 18 1993
 Unit : CENTIMETER

The zero level of the pressure gauge
 relative to the fixed point.
 -7.238m Jan. 12 1993
