

**Oceanographic Data of the 39th Japanese Antarctic Research Expedition
from November 1997 to March 1998**

Miwako YORITAKA and Akihiro MASUYAMA

Hydrographic Department, Japan Coast Guard,
3-1, Tsukiji 5-chome, Chuo-ku, Tokyo 104-0045

The results of oceanographic observations on board the icebreaker "Shirase" and tidal observations at Syowa Station, Antarctica are presented in this report. The oceanographic observations were carried out by the summer party of the 39th Japanese Antarctic Research Expedition (JARE-39) during the austral summer of 1997/1998. The tidal observations were carried out by the winter party of JARE-38 from February 1997 to January 1998.

1. Oceanographic observations

The track of the icebreaker "Shirase" and the sites of oceanographic stations are shown in Fig. 1. Surface water was sampled during the cruise using a plastic bucket of 10 liter capacity. XBT (expendable bathythermograph), XCTD (expendable CTD) and serial observations were taken in the Southern Ocean. Three surface drifting buoys were deployed in the Antarctic Circumpolar Current.

(1) Surface water sampling

Surface water was sampled one or two times a day at 44 stations for chemical analysis. The results are given in Table 1.

(2) Monitoring of marine pollution

Surface water was sampled at 10 stations in the Southern Ocean for monitoring of marine pollution. Items and methods of analysis are given in the following section (6).

(3) XBT observations

XBT observations were carried out at 215 stations in the Southern Ocean from Fremantle to Antarctica, from Antarctica to Cape Town, from Cape Town to Antarctica and back to Sydney. The results are listed in Table 2.

(4) XCTD observations

XCTD observations were carried out at 100 stations along the same route as XBT observations. The results are listed in Table 3. Salinity is not calibrated.

Vertical sections of water temperature with XBT and XCTD observations are shown in Figs. 2, 3, 4 and 5.

(5) Serial observations

Serial observations with the Rosette sampler, equipped with twenty three Niskin bottles of 2.5 liter capacity, and CTD (Conductivity, Temperature and Depth profiling system: Falmouth Scientific FSI TRITON ICTD) were carried out at 14 stations. The results of serial ovservation and meteorological data are given in Table 4.

(6) Chemical analysis of sampled water

Chemical analysis of seawater collected with the bucket or the Niskin bottle was done by the following methods. Item (a) was calculated from conductivity using the 1978 practical salinity scale (UNESCO, 1981). Items (b), (d) and (h) were carried out with the methods described by Strickland and Parsons (1972). Item (c) was analyzed by the Winkler method as modified by Carpenter (1965) for more precision. Item (e) was analyzed with the method in Motomizu and Korechika (1988). Items (f) and (g) were analyzed with the method in Bergamin *et al.* (1978), Andersson (1979) and Gine *et al.* (1980). Items (i), (j) and (k) were analyzed with the method in Hydrographic Department (1995).

- (a) Practical salinity: Conductive salinometer (Guildline Autosal salinometer model 8400B).
- (b) pH: Glass electrode method (Horiba digital pH meter F-16).
- (c) Dissolved oxygen: Carpenter method (Hirama model ART-3 DO-1).
- (d) Phosphate-P: Molybdenum blue method (Shimadzu model UV-1600 spectrophotometer).

- (e) Silicate-Si: Molybdenum yellow method (Shimadzu model UV-1600 spectrophotometer).
- (f) Nitrite-N: Naphthylethylenediamine method (Shimadzu model UV-1600 spectrophotometer).
- (g) Nitrate-N: Cadmium (Cd) - copper (Cu) reduction column, Naphthylethylenediamine method (Sanuki FI-3000 Flow Injection Analysis system).
- (h) Ammonium-N: Indophenol blue method (Shimadzu model UV-1600 spectrophotometer).
- (i) Petroleum oil: n-hexane extraction - fluorophotometric analysis.
- (j) Cadmium (Cd): Solvent extraction - atomic absorption spectrophotometry.
- (k) Mercury (Hg): Cold vapor atomic absorption spectrophotometry.

The results of analysis of items (a) to (h) are given in Tables 1 and 4. The results of monitoring of marine pollution items (i) to (k) are given in Table 5.

(7) Current observation with surface drifting buoys

Each surface drifting buoy is a spherical buoy of 35 cm diameter, from which hangs a drogue of 1 m diameter, 8 m length (C-2340, TOYOCOM Co.). Buoy data from each drift buoy were transmitted to the data processing center through the NOAA satellite, and the Argos system offered buoy position and surface water temperatures to each user.

The first surface drifting buoy was deployed at 60°51'S, 149°56'E on March 14, 1998. It was operated until March 13, 1999. The second was deployed at 56°28'S, 150°22'E on March 15, 1998. It was operated until February 24, 1999. The third was deployed at 51°54'S, 149°49'E on March 16, 1998. It was operated until March 15, 1999. The trajectories of the three buoys are shown in Fig. 6.

2. Tidal observations at Syowa Station

Tidal observations at Syowa Station have been carried out since 1965. The tide gauge (QWP-8-303D, Meisei Denki Co.) was set on the sea bottom about 15 m below the sea surface at Nisi-no-ura Cove, East Ongul Island by JARE-36 members on February 2, 1995. Results obtained from February 1997 to January 1998 are described in this report. The gauge was maintained by Dr. M. Kanao, a member of the JARE-38 winter party, through the year. The methodology of tidal observation is described by Odamaki *et al.* (1991). In this system, the relative water pressure compensated for atmospheric pressure is measured with a quartz oscillator. The range of the sensor is 0-50 m and its accuracy is 0.01% to full scale, *i.e.* 0.005 m. The data sampled 5 times per second are averaged over one minute and recorded on solid IC memory every 10 min. Hourly sea level was recorded on the hour. Daily and monthly mean sea levels were calculated from the hourly data. The results are given in Table 6.

Acknowledgments

The authors would like to express their sincere thanks to Prof. K. Shibuya, the leader of JARE-39, Prof. Y. Fujii, the leader of JARE-38, Asst. Prof. K. Moriwaki, the summer party leader of JARE-39, Asst. Prof. H. Yamagishi, the summer party leader of JARE-38, and to all of the members of JARE-38 and JARE-39 for their helpful support and valuable advice. The authors also express their sincere thanks to Dr. M. Kanao, the member of the JARE-38 winter party who maintained the tide gauge throughout the whole year.

The authors also express their thanks to Captain M. Chousa, the officers and crew of the icebreaker "Shirase".

Table 4. Serial observation data.

Station 1

Beginning of cast

Date : March 1, 1998
 Time (UT) : 10:03
 Latitude : 63°28.1S
 Longitude : 54°19.4E
 Depth : 4856 m

Meteorological observation

Time (UT) : 10:00
 Weather : o
 Air temperature(dry) : 1.4 °C
 Humidity : 92 %
 Atmospheric pressure : 990.9 hPa

Wind direction : N
 Velocity : 10 m/s
 Wave : N / 1
 Swell : N / 1
 Visibility : 20 km
