The result of oceanographic observations on board the icebreaker “Shirase” and tidal observations at Syowa Station, Antarctica are presented in this report. The oceanographic observations were carried out by the summer party of the 45th Japanese Antarctic Research Expedition (JARE-45) during the austral summer of 2003/2004. The tidal observations were carried out by the winter party of JARE-44 from February 2003 to January 2004.

1. Oceanographic observations

The track of the icebreaker “Shirase” and the sites of oceanographic stations are shown in Fig. 1. Surface water samplings were carried out using a plastic bucket of 10-l capacity. XCTD (Expendable Conductivity, Temperature and Depth profiler), XBT (Expendable Bathy-Thermograph), CTD (Conductivity, Temperature and Depth profiling system) and serial observations were made in the Southern Ocean. Three surface drifting buoys were deployed and LADCP (Lowered Acoustic Current profiler) observations were made at three sites in the Antarctic Circumpolar Current region. These observation were carried out in the Southern Ocean from Fremantle to Antarctica and on the way back to Sydney, and each observation and analytical method are summarized below.

(1) Surface water sampling

Surface water sampling were carried out at 51 stations and the results are given Table 1.

(2) Monitoring of marine pollution

Surface water sampling for monitoring of marine pollution were made at 15 stations. Items and method of analysis are given in the following section of (5).

(3) XCTD and XBT observations

XCTD and XBT observations were carried out at 124 stations (XCTD: 102 stations, XBT: 22 stations). The result are listed in Table 2 and Table 3 . The vertical profiles of water temperature and salinity are shown in Fig. 2 to Fig. 7.

(4) CTD and serial observations

CTD (Falmouth Scientific Inc. TRITON ICTD) and serial observations with Rosette sampler (2.5 -l Niskin sampler × 22) were carried out 18 stations. The result including chemical analysis of sampled water and measured value of temperature and salinity with CTD at each standard depth together with meteorological data are given in Table 4.

(5) Chemical analysis of sampled water

Chemical analysis of seawater sampled with a bucket (10 ℥) for surface observation or Niskin bottles (2.5 ℥) for serial observation was made according to the following methods. The item (a) was calculated from conductivity using the 1987 practical salinity scales (UNESCO, 1981). The items (b), (d) and (h) were carried out with the method described by Strickland and Parsons (1972). The item (c) was analyzed by the winker method as modified by Carpenter (1965) for more precision. The item (e) was analyzed with the method in Motomizu and Korechika (1988). The items (f) and (g) were analyzed with the method in Andersson (1979). The items (i), (j) and (k) were analyzed with the method in Hydrographic and Oceanographic Department (2005).

(a) Practical salinity:	Conductive salinometer (Guidline Autosal salinometer model 8400B).
(b) pH:	Glass electrode method (Horiba digital pH meter F-16).
(c) Dissolved oxygen:	Carpenter method (Sensoren Instrument System dissolved oxygen analyzer).
(d) Phosphate:	Molybdenum blue method (BRAN+LUEBBE model Traacs 800 auto analyzer).
(e) Silicate:	Molybdenum blue method (BRAN+LUEBBE model Traacs 800 auto analyzer).
(f) Nitrite:	Naphthylethylenediamine method (BRAN+LUEBBE model Traacs 800 auto analyzer).
(g) Nitrate:	Cadmium (Cd)-copper (Cu) reduction column, Naphthylethylenediamine method (BRAN+LUEBBE model Traacs 800 auto analyzer).
(h) Ammonium:	Indophenol blue method (Shimadzu Model UV-1600 Spectrophotometer).
(i) Petroleum oil:	N-hexane extraction-fluorophotometric analysis.
(j) Cadmium (Cd):	Solvent extraction-atomic absorption spectrophotometry.
(k) Mercury (Hg):	Cold vapor atomic absorption spectrophotometry.

The results of items (a) to (h) are given in Tables 1 and 4. The results of items (i) to (k) are given in Table 5.

(6) Current observation with three surface drifters

Each surface drifter comprises from a spherical buoy of 35 cm in diameter with a drogue of 1 m in diameter, 7 m in length and 15 m in depth (TOYOCOM Co. Model 2ANZ-1388). Signal transmitted from the drifter are sent to CLS (Data Processing Center in CNES) via NOAA satellites, and the CLS distributes drifter's positions and surface water temperature observed by the drifter to the drifter's owners. The first buoy (ID No. 21853) was deployed at 46°04.6'S, 110°08.6'E on December 6, 2003. The second one (ID No. 21880) was deployed at 55°27.6'S, 109°22.7'E on December 8, 2003. The third one (ID No. 21847) was deployed at 59°10.9'S, 103°40.5'E on December 9, 2003. Three drifters were being in operation until September 30, 2004. The trajectories are shown in Fig. 8.

(7) Current observation with LADCP

LADCP (RD Instruments Co. 300kHz WH-ADCP) observations were carried out at 15 stations and the results are given in Fig. 9. The current data observed in st.14 and st.15 were excepted, because the compass mounted on LADCP has large error of direction with an accuracy of about 5 degrees or more where horizontal magnetic intensity is below 3000 nT (Kikuchi *et al.*, 2004).

2. Tidal observations at Syowa Station

Tidal observations have been continued at Syowa Station since 1965. The tide gauge (QWP-8-303D, Meisei Denki Co.) was installed on the sea bottom, about 15 m water depth, Nisi-no-ura Cove, East Ongle Island by the JARE-36 member on February 2, 1995, and has been continuing observation. The result obtained from February 2003 to January 2004 are described in this report. The methodology of tidal observations is followed Odamaki *et al.* (1991). In this system, the relative water pressure compensated for atmospheric pressure is measured with a quartz oscillator. The range 0-50 m and its precision is 0.01 m. The data sampled once per 2 s are averaged over 30 s on hard disk of recording PC. The gauge was maintained by a member of the winter party of JARE-44, through the year. Hourly sea level was recorded on the hour. Daily and monthly mean sea levels were calculated from the hourly data. The results are given Table 6. The least squares method was employed to the harmonic analysis for one year. The harmonic constants, characteristics of the tide and other details are given Table 7.

On the zero level of the tide gauge:

Every summer, the zero level of the tide gauge has been routinely checked. And, since February 1, 2001, the level of 500 cm below the bench mark No. 1040 was adopted as the reference of the tide levels.

Acknowledgments

The authors would like to express their sincere thanks to Prof. H. Kanda the leader of JARE-45, Prof. M. Ayukawa, the leader of JARE-44, Prof. H. Yamagishi, the winter party leader of JARE-45, Prof. H. Kojima, the winter party leader of JARE-44, and to all the member of JARE-45 and JARE-44 for their helpful support and valuable advices. The authors also express their sincere thanks to Mr. J. Horiuchi, a member of JARE-44 winter party, who maintained the tide gauge throughout a whole year.

The authors also express their thanks to Captain K. Haraguchi, the officers and all crew of the icebreaker "Shirase".

In addition, the authors would like to record their thanks to Ms. K. Hirabayashi for her help compile of this report.
