

CONTENTS

Abstract.....	1
Part I. Polarization, Incident and Azimuthal Angles of Auroral Hiss	
1. Introduction	3
2. Instrumentation	5
2.1. Principle of the observation	5
2.1.1. Observation of polarization with polarimeter and pen-oscillograph method	7
2.1.2. Observation with CRT method	9
2.2. Observing technique	10
2.2.1. Observation of polarization with polarimeter and pen-oscillograph method	11
2.2.2. Observation of polarization, incident angle and arriving direction with CRT method	12
3. Observed Results	15
3.1. General features of auroral hiss.....	15
3.2. Measurement of polarization, incident angle and arriving direction with CRT method.....	19
3.3. Polarization with polarimeter and pen-oscillograph method...	22
4. Discussion of the Observed Characteristics of the Polarization, Incidence Angle and Arriving Direction	27
4.1. Full wave calculation of the polarization and its comparison with the measurements	27
4.2. Effect of waves from multiple directions on polarization record	30
4.3. A device for the direction finding of noisy signals and its application to the study of auroral hiss	34
Part II. Morphology of Auroral Hiss and Its Comparison with that of Low-Latitude Hiss	
1. Introduction	38
2. Morphology of Auroral Hiss	40
3. Morphology of Low-Latitude VLF Hiss	45
4. Correlation of Auroral and Low-Latitude VLF Hiss with Polar Substorms and Worldwide Storms	50
5. Concluding Remarks	54
