

CONTENTS

Abstract	1
1. Introduction.....	3
1.1. Waves in the magnetosphere.....	3
1.2. Auroral hiss observations.....	5
1.3. Generation mechanism of auroral hiss.....	11
1.4. Observations in this study.....	15
1.5. Contributions of the present research.....	20
2. Morphology of Auroral Hiss Emissions.....	22
2.1. Characteristics of auroral hiss.....	22
2.2. Types of auroral hiss.....	27
2.3. Latitudinal dependence of occurrences of auroral hiss.....	35
2.4. Summary.....	40
3. Relationships between Auroral Hiss Emissions and Aurora.....	41
3.1. Aurora associated with auroral hiss.....	41
3.2. Fluctuation of auroral luminosity and auroral hiss occurrence.....	44
3.3. Spatial distribution of aurora and the emission region of auroral hiss.....	49
3.4. Summary	56
4. Arrival Direction of Auroral Hiss Emissions.....	57
4.1. Relation between luminous region of aurora and the arrival direction of auroral hiss	58
4.2. Local time dependences of arrival direction of auroral hiss.....	63
4.3. Summary	66
5. Coordinated Ground-Satellite Observations of Auroral Hiss Emissions.....	67
5.1. Introduction	67
5.2. Coordinated observations of auroral hiss and aurora.....	68
5.3. Summary.....	75
6. Geomagnetic and Global Auroral Activities and Auroral Hiss Emissions.....	77
6.1. Occurrence of auroral hiss and the development of magneto- spheric substorm	78
6.2. Global auroral activity and auroral hiss	85
6.3. Summary.....	88
7. Summary and Discussion	90
7.1. Observation results.....	90
7.2. Generation mechanism of auroral hiss.....	91
7.3. Characteristics of the propagation path.....	95
7.4. The generation region of auroral hiss.....	99
8. Conclusions	105

Acknowledgments	109
References	110
Appendix A. Notations (1).....	116
Appendix B. Notations (2).....	116
Appendix C. Direction finding system.....	116
