## 1. Outline of field observations during 1998-2000

A new five-year glaciological program, which mainly consists of observations related to GLOCHANT (Global Change and the Antarctic)/ITASE (International Trans Antarctic Scientific Expedition) and ice sheet dynamics in east Dronning Maud Land was started in 1997 by JARE-38.

To clarify the change in surface mass balance of the ice sheet, shallow ice core drillings were conducted at Dome Fuji Station and H72 point by JARE-39. And to identify the ice flow effect on mass balance of the ice sheet, new traverse routes for measurements of the surface elevation, ice flow velocity and internal layers of the ice sheet were newly established along the principal flow line (MD240-YM60) and the contour lone (2,200 m in elevation) by JARE-40. GPS differential measurements and 3 frequencies radio echo sounding were carried out along the traverse routes.

Oversnow traverses were carried out along the traverse routes shown in Fig. 1. Various observations including surface accumulation, surface flow velocity and chemistry in surface snow have been conducted since JARE-32 during inland traverses from coast to Mizuho Station, Relay Point and Dome Fuji Station (Fujii, 1992; Kamiyama *et al.*, 1994; Motoyama *et al.*, 1995, 1999; Shiraiwa *et al.*, 1996; Azuma *et al.*, 1997; Fujita *et al.*, 1998).

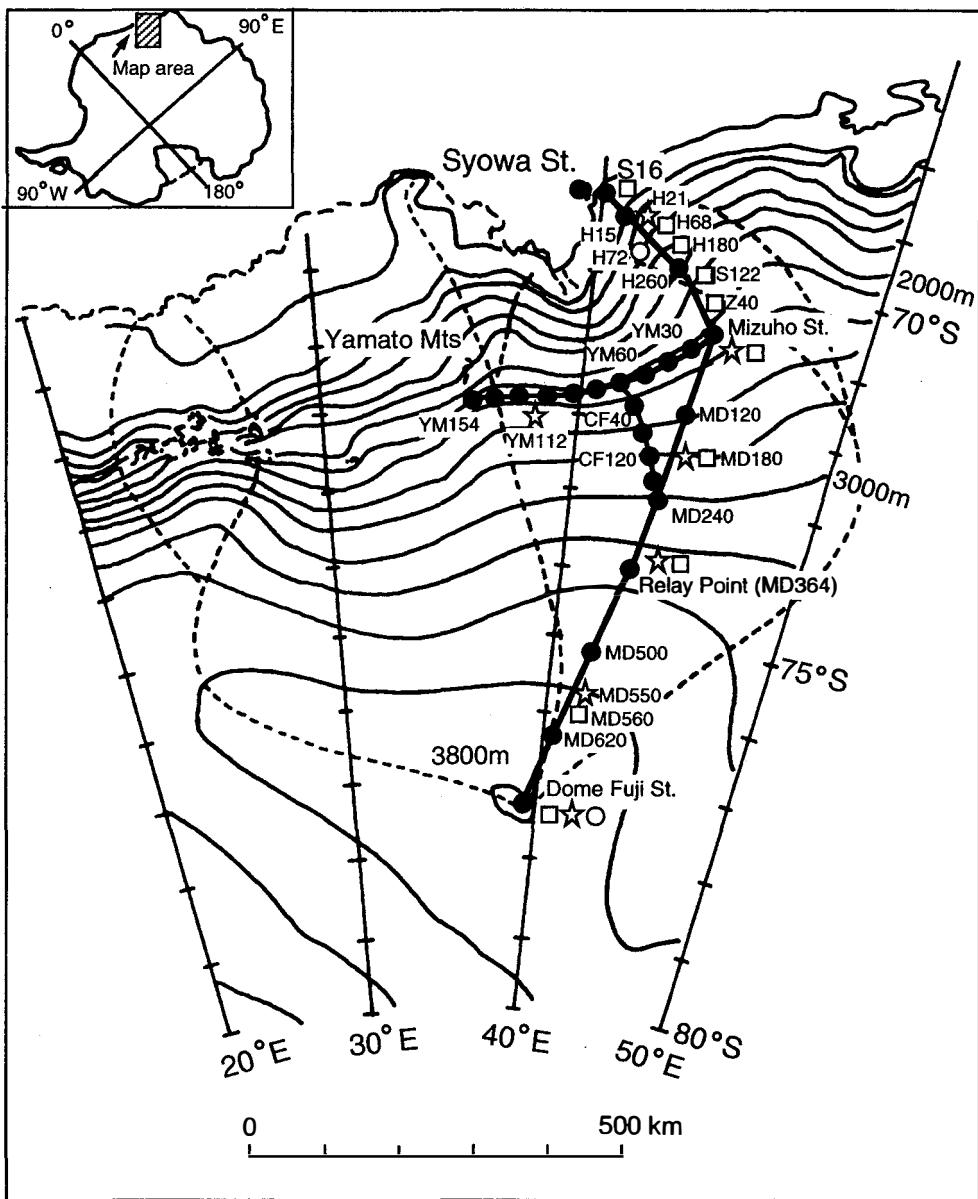

Oversnow traverses conducted by JARE-39 and -40 are listed in Table 1-1. Table 1-2 shows the items of glaciological and meteorological observations conducted during the oversnow traverses. The participants and their assignments in the JARE-39 and JARE-40 program are listed in Table 1-3.

We would like to express our sincere thanks to all members of JARE-39 and JARE-40 who extended generous and long term support in the fieldwork.

-c	30 Dec. 1999	8 Jan. 2000	Mizuho YM154	304	7	SM100(4)
-d	14 Jan. 2000	18 Jan. 2000	YM154 YM60	183	7	SM100(4)
-e	19 Jan. 2000	24 Jan. 2000	YM60 CF80 MD240	171	7	SM100(4)
-f	25 Jan. 2000	7 Feb. 2000	MD240 S16	505	7	SM100(4)

SM50 and SM100 are types of oversnow vehicles. The numbers of each type vehicle are shown in parentheses.

Traverse 1-b was joint traverse with JARE-38.

Table 1-2. Glaciological and meteorological observations during the oversnow traverses.

Item	Interval	Traverse No.	Main observers
Positioning along routes	2 km	3 and 7-e	Kojima, Furukawa and Matsuoka
Snow accumulation along routes	2km	1, 4, 6 and 7	Yamada, K. Suzuki, Furukawa and Matsuoka
Stake farm and stake row		1, 4, 6 and 7	Yamada, K. Suzuki, Furukawa and Matsuoka
Snow sampling	10km	1, 4, 5, 6 and 7	K. Suzuki, Yamada and T. Suzuki
Pit observation and sampling		4, 5	Yamada, K. Suzuki and Iizuka
Shallow ice coring		2 and 4	Yamada, K. Suzuki and Hashida
GPS observation		5 and 7	Furukawa
Radio echo sounding	continuous	7	Matsuoka
Aerosol sampling		7	T. Suzuki
Firm air sampling		2 and 4	Hashida, Yamada and K. Suzuki
Set-up and maintenance of AWS		4, 6 and 7	K. Suzuki and Matsuoka
Meteorological observations		1, 2, 3, 4, 5, 6 and 7	Saito, Hashida, Horikawa, Yasuda, Ohno, Iizuka, Murakata and Yasugahira
Meteorite collecting		3	Kojima, Y. Sato and Kaiden

AWS: abbreviation of Automatic Weather Station

## **2. Position**

Observers: Teruo Furukawa and Kenichi Matsuoka

Two routes were newly established in 1998 and 1999 by JARE-39 and JARE-40. Route YM between Mizuho Station and Yamato Mountains was restored in 1998 by JARE-39 roughly along Route YM established in 1982 by JARE-23 (Nishio *et al.*, 1986). JARE-40 newly established Route CF from YM60 (CF=0) to MD240 (CF=172) along the principal flow line in 1999. On Routes YM and CF, snow stakes were installed every 2 km. These stakes were used for snow accumulation measurements.

Positions (latitude and longitude) of stakes were determined every 2 km along new routes with GPS (Global Positioning System). The GPS data were calculated on the WGS-84 earth ellipsoid with broadcast ephemerides. The positions of the stations were shown in Table 2-1 and 2-2. The error of positioning with GPS is a few tens of meters, which is good enough for navigation.

### **3. Net accumulation of snow**

Observers: JARE-38: Hideaki Motoyama and others

JARE-39: Tomomi Yamada, Keisuke Suzuki and others

JARE-40: Teruo Furukawa and others

Net accumulation of snow was measured by stake method along oversnow traverse routes in 1997-2000 (Fig. 1).

#### **2.1. Route S-H-Z (Mizuho Route)**

Stake heights along the route were measured in September 1997 by JARE-38 (Motoyama *et al.*, 1999), in January and October 1998 by JARE-39, and September 1999 and January–February 2000 by JARE-40. The heights of differences, which approximate the net balance of snow along the routes, are tabulated in Table 3-1. The minimum readings were 1 cm.

#### **2.2. Route MD (Dome Fuji Route)**

Stake heights along the route from IM0 to MD364 (Relay Point) were measured in October 1997 by JARE-38 (Motoyama *et al.*, 1999), in November–December 1998 by JARE-39, and in December 1999 by JARE-40. The height differences are tabulated in Table 3-2. The minimum readings were 1 cm.

#### **2.4. 36-Stake farms, 50-stake row and 101- stake row along the route**

36-stake farms (100 m x 100 m in area, see Fig. 2 in Azuma *et al.*, 1997) are set at S16, H68, H180, S122 and Z40 along the Mizuho route and Dome Fuji Station. Stake heights of the farms were measured by JARE-38, -39 and -40 on the way to and from Dome Fuji Station. The results are shown in Tables 3-3, 3-4, 3-5, 3-6, 3-7 and 3-8. The last row gives averages and standard deviations of net snow accumulation for each period.

50-stake rows are set at MD180, MD364 and MD560. These stake rows are perpendicular to the prevailing wind direction, and the distance between stakes is 2 m (see Fig. 4 in Azuma *et al.*, 1997). The results are shown in Table 3-9, 3-10 and 3-11.

A 101-stake row located at Mizuho Station was measured (see Fig. 3 in Azuma *et al.*, 1997). The results of the measurements are given in Table 3-12.

#### 4. Surface meteorological data during oversnow traverses

Observers: Kyoaki Saito:	Traverse 1-a
Kazuhisa Horikawa:	Traverses 2 and 4
Yoshinori Iizuka:	Traverse 5
Eishin Murakata:	Traverse 6
Kazuya Yasugahira:	Traverse 7

Meteorological observations were carried out during the oversnow traverses several times a day. We measured air pressure (Pa), air temperature (Ta), wind direction (WD) and wind speed (WS) with the instruments and observed visibility (V), weather (W), hydrometeors (Hydro), cloud amount in tenths (N), individual cloud amount and types (CL) and atmospheric phenomena. The instruments and accuracy of the measurements are given in Table 4-1 and 4-2. The notation used in this section is shown in Table 4-3. In case of using portable instruments, “\*\*” was added to the right of the data.

Tables 4-4, 4-5, 4-6, 4-7 4-8 and 4-9 show meteorological data observed during traverses 1-a, 2, 4, 5, 6 and 7, respectively.

Table 4-1. Instruments and accuracy of meteorological observations.

Item	Instrument	Accuracy
Air pressure	Aneroid gauge	±0.1hPa
Air temperature	Platinum resistance	±0.1°C
Wind direction	Magnetic compass	±5°
Wind speed	3-cup anemometer	±0.1m/s
Visibility	Visual observation	
Cloud amount	Visual observation	
Weather	Visual observation	
Individual	Visual observation	

Table 4-2. Portable instruments and accuracy of meteorological observations.

(“\*” is added to the right of the data)

Item	Instruments	Accuracy
Air pressure	Aneroid gauge	$\pm 1\text{hPa}$
Air temperature	Sling type glass thermometer	$\pm 0.5^\circ\text{C}$
Wind direction	Magnetic compass	$\pm 5^\circ$
Wind speed	Portable 3-cup anemometer	$\pm 0.5\text{m/s}$
Visibility	Visual observation	
Cloud amount	Visual observation	
Weather	Visual observation	
Individual cloud	Visual observation	

Table 4-3. Notation used in tables in this section.

LT	Local standard time at Syowa station (UTC + 3 hours )
Pa	Air pressure (hPa)
Ta	Air temperature ( $^\circ\text{C}$ )
WD	Wind direction in 16directions
WS	Wind speed (m/s)
V	Visibility (km)
W	Weather ○ Clear, ① Fine, ② Cloudy (upper cloud are predominant) ◎ Cloudy, ✕ Snow, ↗ Drifting snow, ↘ Blowing snow ↗ Snow storm, ← Diamond dust, Ⓜ Ice fog, Ⓜ Fog, (≡) Partially fog
N	Cloud amount in tenth
CL	Individual cloud amount and genus
AP	Atmospheric phenomenon
