POLEX-SOUTH DATA, PART 5

MICROMETEOROLOGICAL DATA AT MIZUHO STATION AND TEMPORARY STATIONS IN MIZUHO PLATEAU, ANTARCTICA IN 1981

(Nagaoka Technical College, Nagaoka 940)

1. Introduction

As part of the Japanese POLEX-South program (1979-1981) conducted by the Japanese Antarctic Research Expedition (JARE), micrometeorological observation was done on a 30 m tower at Mizuho Station (70°42'S, 44°20'E, 2230 m above sea level) and at 7 temporary stations in Mizuho Plateau. The result of the observation made in 1981 by the members of the JARE-22 is reported in this volume. The preceding data taken in 1979 and 1980 by the JARE-20 and JARE-21 members were already published in JARE Data Reports, No. 62 (Wada et al., 1981) and No. 79 (Ohata et al., 1983). Surface meteorological data at Mizuho Station in 1981 were published by Nishimura et al. (1982).

2. Micrometeorological Observation at Mizuho Station

The following data of micrometeorology were observed on the 30 m tower at Mizuho Station.

(1) Air temperature at 30 m, 16 m, 8 m, 4 m, 2 m, 1 m and 0.5 m levels.

(2) Snow temperature at 0.1 m, 0.3 m, 0.7 m, 0.9 m, 1.4 m, 3.4 m, 5.4 m and 10.4 m in depth.

(3) Wind speed at 30 m, 16 m, 8 m, 4 m, 2 m, 1 m and 0.5 m levels.

(4) Wind direction at 30 m and 2 m levels.

2.1. Instruments and Methods

(1) Air temperature

Platinum resistance type thermometers, which were mounted inside a shelter that prevents the direct insolation, were used. It was matched with a Wheatstone bridge for conversion into voltage value output. Calibration was made by a standard mercury thermometer which had been calibrated by the Japan Meteorological Agency in Tokyo.

(2) Snow temperature

A platinum resistance thermometer was installed in a metal pipe and was buried in the snow. The type of the sensor and the method of voltage value conversion are same with those used for measuring air temperature. The depth of the thermometer changed slightly owing to accumulation and erosion on the snow surface, so the monthly net accumulation was measured (Satow et al., 1983).

(3) Wind speed

Three-cup generator type anemometer was used. At a few times in case of calm and snowy weather, hoar frost had developed on the anemometer and the cup stopped rotating. In a few cases

data were not obtainable due to this frost deposition. The relative correction values were obtained through field calibration for each sensor.

(4) Wind direction

A potential type wind vane was used for this measurement. The determination of the true north was made by a magnetic compass.

The characteristics of these sensors are shown in Table 1 and a detail report of the sensors can be seen in Mae et al. (1981). The height and depth of the sensors from the snow surface are shown in Table 2.

2.2. Data Processing and Evaluation of Data

The recording system was designed and manufactured by Kaijo Denki Co. (Japan). The data were sampled once a minute. The digital values were recorded on a magnetic tape, and simultaneously analog values were monitored on chart recorders. Most of the data shown in the present volume are the one hour average value processed from the magnetic tape. The micrometeorological data for every hour from January 1 to May 30, 1981 are listed in Table 5. The data are the average value from 01 to 60 minutes of the hour shown under the LT. The data for the LT with asterisk (*) are read from the recording chart. These were adopted when the magnetic tapes were not available or when there were too many missing data within the one hour record. The data which could not be obtained due to the defaults in the sensors or in the

recording systems are shown by 99.9 in the table.

3. Meteorological Observation at the Temporary Stations in Mizuho Plateau

Meteorological observation in Mizuho Plateau was made temporally in 1981 and 1982 as shown in Table 3. The scheme of the observation and the data acquisition system including the mobile station were reported by Inoue et al. (1983). The present report contains the hourly values of the surface meteorological elements at the individual stations. The micrometeorological data at V142 and the surface meteorological data at other temporary stations in addition to the employed instruments are shown in Table 6 and Table 7.

4. Notations in Tables

(1) Table 5

LT: Local standard time of Mizuho Station (45°E LMT, GMT + 3h)

TAn: Air temperature (°C)

TA1	30 m	TA2	16 m	TA3	8 m	TA4	4 m
TA5	2 m	TA6	1 m	TA7	0.5 m		

TSn: Snow temperature (°C)

TS0	0.1 m	TS1	0.3 m	TS2	0.7 m	TS3	0.9 m
TS4	1.4 m	TS5	3.4 m	TS6	5.4 m	TS7	10.4 m

WVn: Wind speed (m/s)

WV1	30 m	WV2	16 m	WV3	8 m	WV4	4 m
WV5	2 m	WV6	1 m	WV7	0.5 m		

WDn: Wind direction (angle from the true north)

WD1 30 m WD5 2 m

b) Table 6

WD: Wind direction (angle from the true north in degree)

U: Wind speed (m/s)

T: Air temperature (The data with (') are the data measured by transistor thermometer or thermo-couple thermometer). Numbers in brackets denote the height of sensor (unit in m).

c) Table 7

WD: Wind direction at 4 m (angle from the true north in degree)

WS: Wind speed at 4 m (m/s)

AT: Air temperature at 4 m (°C)
