

**Papers presented to the 24th Symposium on Antarctic Meteorites  
held at the National Institute of Polar Research, Tokyo  
June 1 - 3, 1999**

1. Asame K., Kawano S., Matsuda J., Maruoka T. and Kurat G.  
Nitrogen isotopic signatures of metal and graphite in Canyon Diablo
2. Buchanan P. C., Lindstrom D. J. and Lindstrom M. M.  
Variations in source areas and proportions of partial melting and fractional crystallization as indicated by recent eucrite analyses
3. Bérczi Sz., Gál-Sólymos K., Lukács B. and Martinás K.  
Measurements and theoretical studies on the ALHA 77257, 77-4 ureilite: Igneous/primitive dichotomy in its mineralogy and chemistry, paradoxes and solutions in its thermal history
4. Bérczi Sz., Holba Á. and Lukács B.  
Splitting of the two Wiik lines in the Urey-Craig field: C-S are related to H-S like as LL-S are related to L-S (Statistical analyses of the NIPR dataset, VII)
5. Chikami J. and Miyamoto M.  
The opaque mineral assemblage of matrix in L chondrites
6. Detre C. H., Tóth I., Don G., Kiss A. Z., Uzonyi I., Bodó P. and Schléder Z.  
The Permian-Triassic supernova event
7. Floss C., Crozaz G., Yamaguchi A. and Keil K.  
Trace element constraints on the origins of highly metamorphosed Antarctic eucrites
8. Fujita T.  
Formation condition of fine phosphides in metals of Yamato-790126 (L) chondrite
9. Fukuoka T., Tazawa Y., Terada K., Mori T., Sano Y., Nakamura T., Imae N., Noguchi T., Nogami K., Ohmori R., Murakami T., Kondo N., Nakai I. and Ohashi H.  
Chemical composition of glassy spherules collected at the Dome Fuji Station by the 37th JARE team
10. Funaki M., Tunyi I., Orlicky O. and Porubcan V.  
Stability of natural remanent magnetization and shock remagnetization of Rumanova (H5) chondrite
11. Hanamoto T., Tsuchiyama A., Kawabata T., Koezuka T., Tsujimoto Y. and Wasson J. T.  
Three dimensional structure of pallasite Esquel by X-ray computed tomography
12. Hirata N., Yamaguchi A. and Sekine T.  
Shock deformation of silica spherules in Cu-powder pressure media: Implication for the chondrule flattening
13. Hiroi T. and Sasaki S.  
Space weathering of olivine as a key to understanding S/A/R/V asteroids and lunar soils
14. Hiyagon H. and Hashimoto A.  
An ion microprobe study of oxygen isotopes in various types of inclusions in Yamato-791717 (CO3) chondrite: Oxygen isotopes vs fayalite content in olivine
15. Hutson M. and Ruzicka A.  
A simple three-step model for the origin of the enstatite chondrites
16. Ikeda Y., Prinz M., Nehru C. E., Boesenberg J. S. and Kita N. T.  
Petrology of the Dar al Gani (DAG) 319 polymict ureilite
17. Imae N., Nakamura N. and Kojima H.  
Mineralogical studies in five Rumuruti chondrites: Y-75302, Y-791827, Y-793575, Y-82002, and A-881988
18. Imae N., Noguchi T., Nakamura T. and Nozaki W.  
X-ray microprobe analyses of Antarctic micrometeorites from the Dome Fuji Station
19. Imai H. and Yurimoto H.  
Distribution of oxygen isotopes in a type-C CAI of the Allende meteorite

20. Itoh D. and Tomeoka K.  
Dark inclusions in four CO3 carbonaceous chondrites
21. Jabeen I., Kusakabe M., Nakamura T. and Nagao K.  
Parent body processes in Allende: Evidence from oxygen isotope study of the Allende chondrules
22. Jull A. J. T., Klandrud S. E., Cielaszyk E. and Cloudt S.  
Carbon-14 terrestrial ages of meteorites from the Yamato region, Antarctica
23. Kawabata T., Tsuchiyama A. and Kondo M.  
Three dimensional structure of chondrule texture: Possibility of a spinning chondrule
24. Kimura M., El Goresy A., Suzuki A. and Ohtani E.  
Heavily shocked Antarctic H-chondrites: Petrology and shock history
25. Kimura S., Kaito C. and Wada S.  
Structure of quenched carbonaceous composite (QCC) and formation of micro-diamond by heat treatment of QCC
26. Kita N. T., Ikeda Y., Prinz M., Nehru C. E., Weisberg M. K., Morishita Y. and Togashi S.  
In-situ SIMS oxygen isotopic analyses of clasts from DAG 319 polymict ureilite
27. Kiuchi H., Tachibana S. and Tsuchiyama A.  
Evaporation experiments on naphthalene (C<sub>10</sub>H<sub>8</sub>) by thermogravimetry (TG)
28. Kobatake H., Satoh H., Tsukamoto K. and Fujimaki H.  
The distribution of oxygen isotopes and cations in Allende matrix
29. Kojima H., Kaiden H. and Yada T.  
Meteorite search of JARE in 1998-99 season
30. Kojima T., Yatagai T. and Tomeoka K.  
A dark inclusion in the Manych LL (3.1) ordinary chondrite: A product of strong shock metamorphism of unequilibrated chondritic material
31. Komatsu M. and Miyamoto M.  
Behavior of minor elements in olivine and orthopyroxene during metamorphism in LL chondrites
32. Kondorosi G., Hirota Y., Hori K., Nakamura N., Morikawa N. and Misawa K.  
Trace element studies of leachates and residues from the lherzolic shergottite Y-793605
33. Lindstrom M. M.  
Lunar and martian meteorites: Suites, pairing, and implications
34. MacPherson G. J.  
Mg-chondrules, Al-chondrules, and CAI: Connections
35. Marakushev A. A., Bobrov A. V. and Chaplygin O. V.  
Antarctic chondrites in the oxygen isotopic system
36. Matsuda J., Namba M., Maruoka T. and Kurat G.  
On the primordial composition of the noble gases in Canyon Diablo
37. Mikouchi T., Miyamoto M. and McKay G. A.  
Olivine megacrysts in the basaltic Martian meteorites Dar al Gani 476 and EETA79001: Cooling rates deduced from Fe-Mg zoning of olivine
38. Mitreikina O. B. and Zinovieva N. G.  
Differentiation of the matrix material in the Kainsaz (CO) carbonaceous chondrite
39. Miura Y. N., Nagao K. and Okazaki R.  
Noble gases in five aubrites, Cumberland Falls, Mayo Belwa, Mt. Egerton, Norton County and Peña Blanca Spring
40. Mostefaoui S., Kita N. T., Nagahara H., Togashi S. and Morishita Y.  
A short period of chondrule formation: The <sup>26</sup>Al-<sup>26</sup>Mg evidence from two type II chondrules in a highly unequilibrated ordinary chondrite
41. Nagahara H., Kita N. T., Ozawa K. and Morishita Y.  
Chondrule formation by condensation of major elements
42. Nagai H., Kokubo M., Kobayashi T. and Honda M.  
Cosmogenic <sup>10</sup>Be and <sup>26</sup>Al in iron meteorites and the inclusions

43. Nakai I., Kondo N., Sasaki M., Terada Y., Terada K., Noguchi T. and Nakamura T.  
Characterization of cosmic dust samples by synchrotron radiation X-ray fluorescence analysis
44. Nakamura N., Sawada S., Tamaki M., Kondorosi G., Imae N., Kojima H., Clayton R. N. and Mayeda T. K.  
Consortium studies of five Antarctic Rumuruti-group chondrites: A progress report
45. Nakamura T. and Takaoka N.  
Solar wind in micrometeorites: Characterization by stepped pyrolysis
46. Nakamura T., Noguchi T. and Nakamura Y.  
Relative mineral abundance of individual micrometeorites collected at the Dome Fuji Station
47. Nakamura Y. and Aoki Y.  
Carbon minerals in ureilites: Implications for the genesis of diamond
48. Nakasyo E., Maruoka T. and Matsuda J.  
The influence of hot water alteration on noble gas composition in the Allende meteorite
49. Naraoka H.  
Molecular and isotopic distributions of polyaromatic hydrocarbons (PAHs) in three Asuka carbonaceous chondrites (CM2) from Antarctica
50. Newton J., Franchi I. A. and Pillinger C. T.  
An oxygen isotope study of enstatite meteorites
51. Ninagawa K., Toyoda S., Imae N. and Kojima H.  
Thermoluminescence of Japanese Antarctic meteorites III
52. Noguchi T. and Nakamura T.  
Mineralogy of Antarctic micrometeorites recovered from the Dome Fuji Station
53. Noguchi T., Imae N., Nakamura T., Nozaki W., Terada K., Mori T., Nakai I., Kondo N., Sasaki M., Murakami T., Fukuoka T., Nogami K., Oomori R. and Ohashi H.  
Antarctic micrometeorites recovered from the Dome Fuji Station: A combined study of mineralogy, bulk chemistry, and isotopic compositions
54. Ohnishi I. and Tomeoka K.  
Dark inclusions in the Mokoia CV3 chondrite: Record of aqueous alteration, thermal metamorphism and shock metamorphism
55. Okazaki R., Nakamura T., Takaoka N. and Nagao K.  
Crush-released noble gases from ureilites
56. Osawa T., Nagao K., Nakamura T. and Takaoka N.  
Noble gas measurement in individual micrometeorites using laser gas-extraction system
57. Ozaki H., Kallemeyn G. W. and Ebihara M.  
Weathering effects on the chemical composition of Antarctic UOCs
58. Pinault L. J., Scott E. R. D., Bogard D. D. and Keil K.  
Portales Valley, a metal-veined H6 chondrite with evidence of internally-generated partial melting of Fe-Ni-S
59. Ruzicka A., Snyder G. A. and Taylor L. A.  
Origins of large, igneous-textured inclusions in ordinary chondrites
60. Satoh H.  
Oxygen isotope microanalysis of a zoned orthopyroxene megacryst in A-881526 diogenite
61. Schnabel C., Herzog G. F., Taylor S., Field M. P. and Sherrell R. M.  
Magnesium isotope abundances in stony Antarctic micrometeorites
62. Sugiura N. and Hoshino H.  
H isotopic compositions in ALH84001
63. Tachibana S. and Tsuchiyama A.  
The possibility of Mg/Si fractionation by incongruent evaporation of enstatite
64. Takeda H., Saiki K. and Ishii T.  
Mineralogy of Y791192, HED breccia and its cratering history on a Vesta-like body

65. Terada K., Sano Y., Mori T., Nakamura T., Nozaki W., Noguchi T., Imae N., Fukuoka T. and Japan AMM working group  
Isotopic studies on Antarctic micrometeorites collected at the Dome Fuji Station in 1996 using SHRIMP
66. Tomiyama T. and Kitamura M.  
Relation between grain size distributions and the petrologic types of ordinary chondrites
67. Tsukamoto K., Satoh H., Takamura Y. and Kuribayashi K.  
A new approach for the formation of olivine-chondrules by aero-acoustic levitation
68. Ushikubo T., Hiyagon H., Sugiura N. and Ul'yanov A. A.  
Mg isotopic anomaly of two types of anorthite in CAIs
69. Warren P. H.  
Differentiation of siderophile elements in the Moon and the HED parent asteroid
70. Weisberg M. K. and Prinz M.  
Zoned metal in the CR clan chondrites
71. Yada T. and Kojima H.  
The collection of micrometeorites in Yamato meteorite ice field of Antarctica in 1998
72. Yamanouchi T. and Fujimaki H.  
Petrological comparison between chondrules of Sahara 97096 (EH3) and Allende (CV3)
73. Zaizen S., Nakasyo E., Maruoka T. and Matsuda J.  
Purely physical separation of the phase enriched in noble gases from the Allende meteorite
