

The X-ray Diffraction Patterns and Their Mineral Components of Evaporites at Prince Olav Coast, Antarctica

Jun-ichi HIRABAYASHI and Joyo OSSAKA
(Laboratory of Geology and Mineralogy, Tokyo
Institute of Technology, Meguro-ku, Tokyo)

This compilation reports the X-ray diffraction patterns and mineral components of evaporites collected from seven areas along the Prince Olav Coast (Shinnan Rocks, Cape Hinode, East Ongul Island, West Ongul Island, Langhovde, Skarvsnes and Skallen) during the period from December 31, 1972 to February 12, 1974.

The X-ray diffraction patterns of evaporites from the respective areas and the corresponding sampling points in maps are presented.

The mineral components of evaporites identified by X-ray powder diffraction are tabulated.

The X-ray diffraction patterns are presented and their results of identifications of the soils at same areas are also tabulated.

These samples and original charts are deposited at the Laboratory of Geology and Mineralogy, Tokyo Institute of Technology, 12-1, Ookayama 2-chome, Meguro-ku, Tokyo 152, Japan.
