

## Oceanographic Data of the 11th Japanese Antarctic Research Expedition 1969-1970

Yoshio SETO\* and Ryoki SARUWATARI\*

第11次南極地域観測隊海洋部門報告

脊 戸 義 郎\*・猿 渡 了 巳\*

**要旨：**第11次南極地域観測において、定常観測（1969～1970）として行なった表面観測、STD 観測、BT 観測および鉛直（各層）観測の結果を報告する。

This report deals with the data of the oceanographic observations made on board the icebreaker FUJI during the summer mission of the 11th Japanese Antarctic Research Expedition in 1969-1970. The track chart of the cruise is shown in Fig. 1. The locations of the vertical(serial) observation station, bathythermograph (BT) observation stations, and Salinity-Temperature-Depth(STD) recorder observation stations in the Southern Ocean are given in Fig. 2.

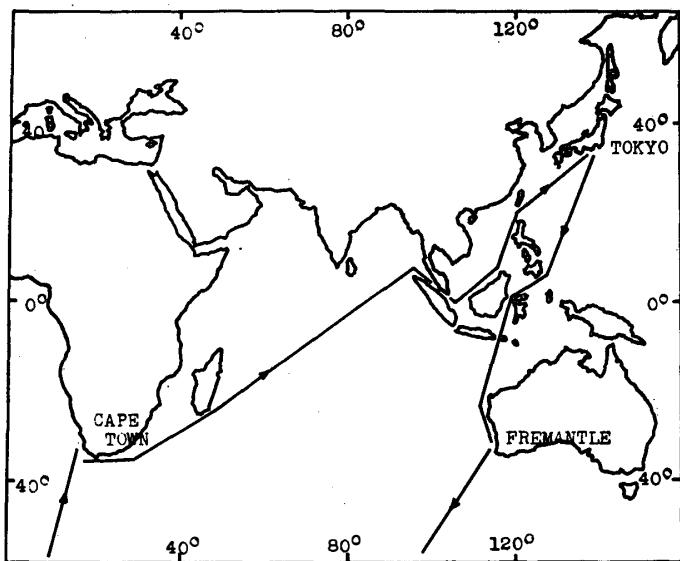

Fig. 1. Track of JARE-11 cruise 1969-1970.

\* 海上保安庁水路部. Hydrographic Division, Maritime Safety Agency, Uchisaiwaicho 1-1-4, Chiyoda-ku, Tokyo.

**Surface observations:** Surface temperature measurements and surface water samplings for chemical analyses were made three times a day during the cruise Fremantle to Syowa Station and twice a day from Tokyo to Fremantle. The results are given in Table 1.

**Current measurements:** Measurements of surface currents were made by GEK from Tokyo to Syowa Station except the region near the magnetic equator and in the pack ice area. The results are also given in Table 1.

**Bathythermograph observation:** Water temperature in the upper layer (surface to about 250 meters depth) was measured with bathythermograph (BT) at almost the same frequency as the surface observations. The results are given in Table 2.

**Vertical(serial) observation:** The observation was made at 47°44'S, 110°27'E. The observed data are shown in Table 3 with relevant meteorological data.

The interpolated and computed values (temperature, salinity, sigma-*t* and dynamic depth anomalies) at standard depths are also included in Table 3. These values were calculated using electronic computer facilities available at the Japanese Oceanographic Data Center of the Hydrographic Division.

**STD observation:** The observations were made at 11 stations in the Southern Ocean along the track of the cruise from Fremantle to Syowa Station (Fig. 2). The results are given in Fig. 3.

**Chemical analyses of sea water:** The followings are the elements and the meth-

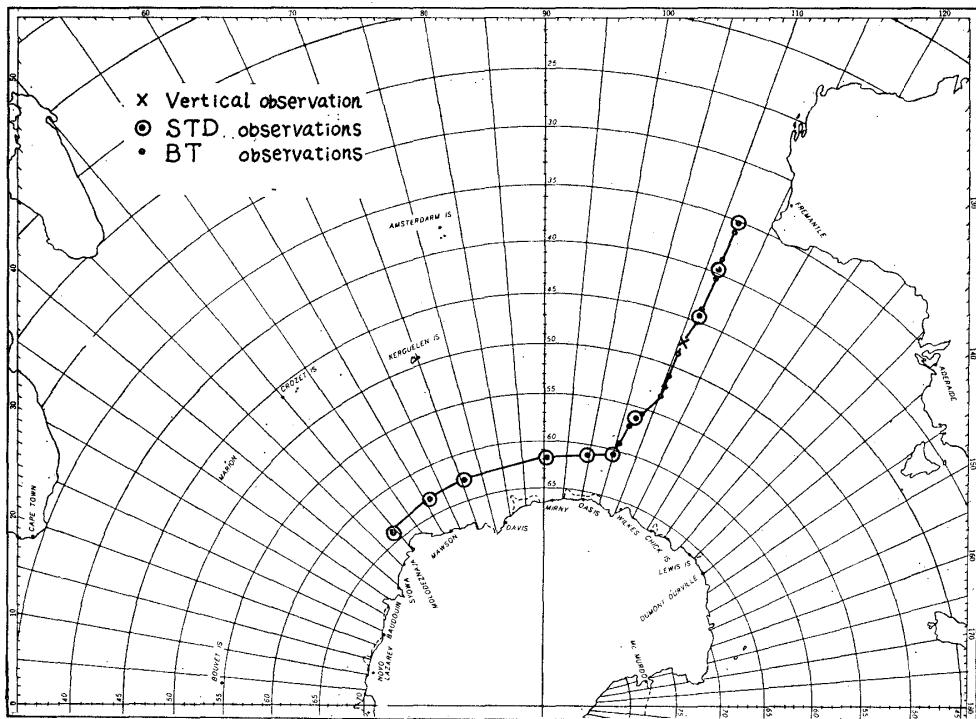

Fig. 2. Track of JARE-11 cruise and oceanographic station.

ods(or instrument) of analyses. The results are also presented in Table 3.

Salinity	Inductive salinometer (Auto-Lab-Model 401 MK III)
pH	pH meter (KPH-51 B Yokogawa Electric Works Inc.)
Dissolved oxygen	Winkler's method
Phosphate-P	Molybdenum blue method*
Reactive silicate-Si	Molybdenum yellow method and reduction method**
Nitrate-N	Modified Morris and Riley method*
Nitrite-N	Sulphanilamide and N-(l-naphthyl)-ethylene-diamine 2 HCl were used as reagent*.
Ammonium-N	Indophenol method
Alkalinity	After 15.00 ml of N/100 HCl was added to 50.0 ml sample, pH of the sample was measured and alkalinity was calculated by Strickland's table*.

#### Acknowledgements

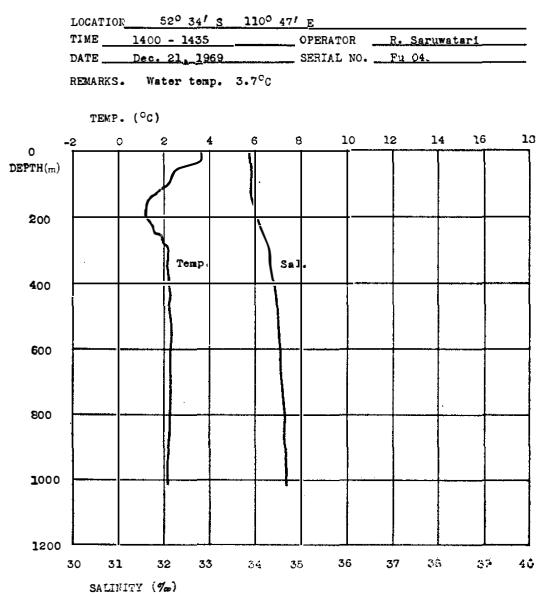

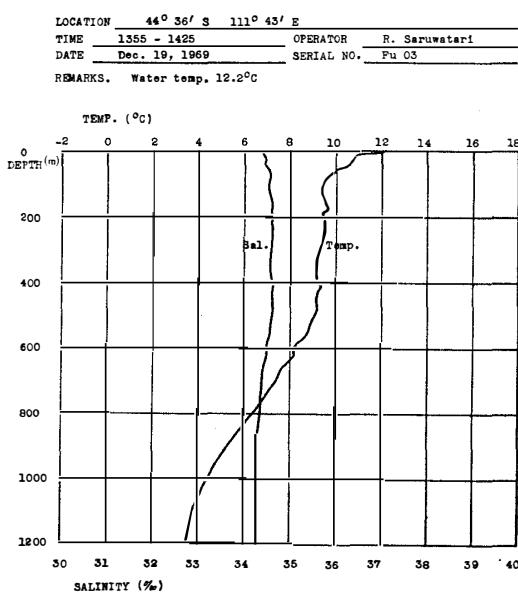

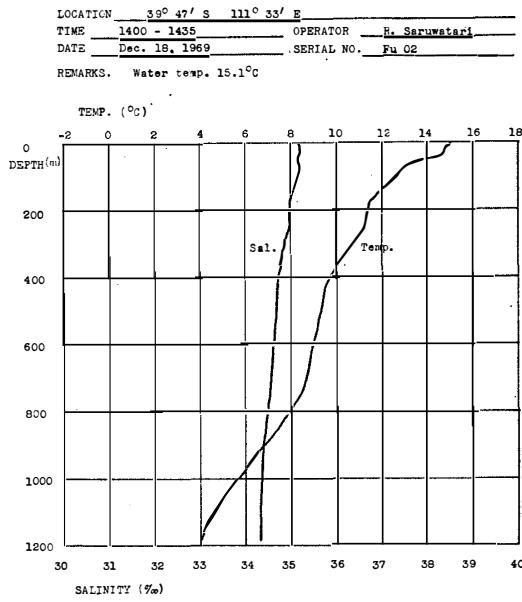

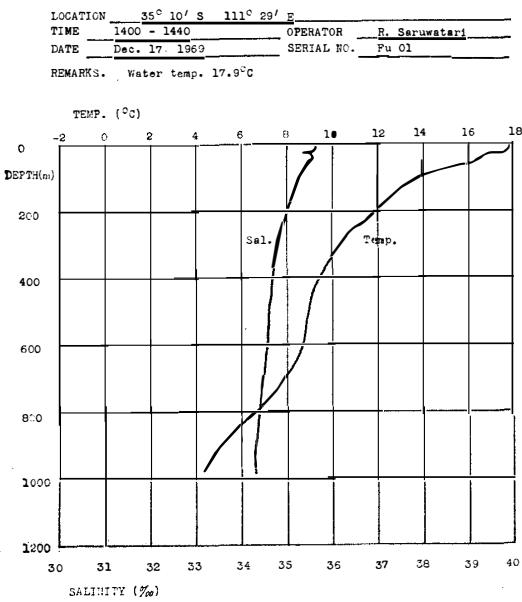

The authors are indebted to Captain H. ISOBE of the icebreaker FUJI and his officers and crew for their co-operation which made these observations possible.

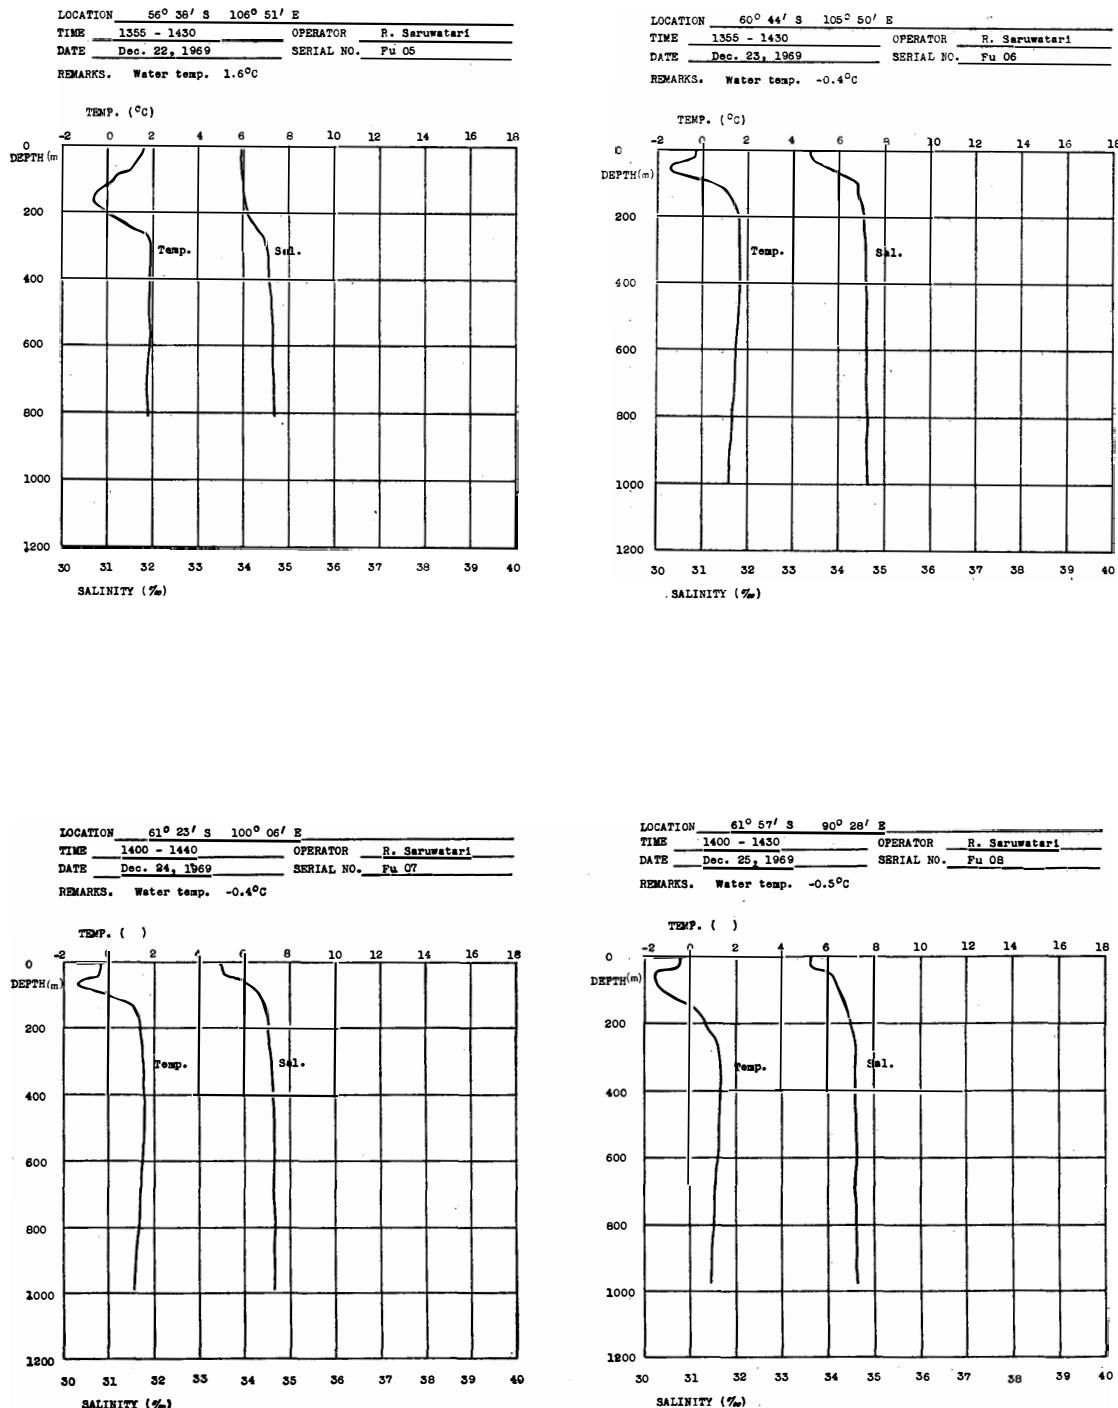

(Received June 14, 1971)

\* J. D. H. Strickland and T. R. Parsons, Manual of Sea Water Analysis (Fisheries Research Board of Canada).

\*\* Silicate determination was done by the molybdenum yellow method for higher silicate concentration samples, and the reduction method using methol-hyposulfite solution as a reductant was adopted for the majority of the samples of lower silicate concentration.
